

■ **WHATSAPP**

iPhone users can make their own WhatsApp stickers now

Every minute, WhatsApp users are sending some stickers without typing anything and saving a new sticker everytime they receive it from someone. So, stickers have created a hype in the WhatsApp world. What if you could make your own sticker just the way you wanted it to be? Using your friend's funny photo, or just a meme, or adding some text and colours you have a new sticker. Now that's possible without installing another app to make these on iOS devices. Recently, WhatsApp has debuted quite a few new features for its users and not wanting to be left behind, now iOS devices and iPhone users have been updated by WhatsApp with a lot of new features. One amongst them as I already mentioned is the fun feature of making your own sticker.

For this feature the WhatsApp update version 23.7.82 is required which is available for eligible iPhones only. You can get your WhatsApp updated by going to the App Store. Once it's updated, you can start using the sticker maker tool and create fun stickers and send them to your friends. The process of creating these stickers is also backed by the iPhone's amazing editing skills. But creating these stickers is really fun and easy.

Snapchat brings AI with AR features

The social media company, in the recently organised Snap Partner Summit 2023, has claimed that it has reached over 750 million monthly active users around the world and is set to change the paradigm for the platform with multiple collaborations in the array of AR tools. Snapchat has emerged as a head-to-head competitor for Meta platforms with its unique audience engagement and user experience. Snapchat is currently optimising its interface for better engagement around global markets and not limited to the US and iPhone dominant user base.

Snap has announced its multi-year partnership with American entertainment company Live Nation. The primary goal of this collaboration is to bring custom AR experiences to 16 mega events, including Beyond Wonderland Southern California and Electric Daisy Carnival, the company said. Snap has also planned on an integration with live event visualisation

company Disguise to attain Snap AR to the world's largest venues and tours. The company suggested that, "During future shows, fans can see AR visuals through the Snapchat camera that interact with the on-stage visual production, via Disguise RenderStream." Furthermore, Snapchat is ready to collaborate with well-known DJ Kygo, to create AR experiences for some of the artist's concerts.

Snap's in-house AR Image Processing technology and 3D Viewer will allow the app to enable the users to try on apparel virtually. Snapchat also aims at using the With the Fit Finder app and AR mirror for accurate size suggestions and trying on products. These features expand Snapchat's Shopping Suite.

Moreover, Snapchat has confirmed a partnership with Coca-Cola to set up an AR-enabled Coca-Cola vending machine and the users can operate the vending machine with gestures. Snap also introduced new Generative AI Lenses which along with Cosmic Lens will allow the users to transform into a sci-fi set up. The app will personalise the experience by suggesting the apt lenses for the user in the particular content format.
