

■ **ARTIFICIAL INTELLIGENCE**

Sam Altman

Sam Altman, the CEO of OpenAI which created the ChatGPT AI chatbot, made waves by announcing a multi-million dollar investment into a little-known life sciences startup that's trying to solve the problem of biological ageing in humans. So in essence they're trying to conquer death!

When Retro Biosciences, in 2022, announced that the company is launching with \$180 million initial funding with the aim "to increase healthy human lifespan by ten years", the biotechnology ecosystem was thrilled and sceptical as to the existence of the company, how it would accomplish this claim and above it all who were the investors that believed so passionately in this concept. To our surprise the MIT report disclosed, there's only one investor who has invested 180\$ million in the venture and he is none other than the ChatGPT mastermind, Open AI's CEO, Sam Altman. The 37-year-old start-up genius, Sam Altman has made a path breaking advancement in technology with his artificial-intelligence company which offer electronic art programs and conversation AI who have been redefining the systems with human-like capabilities. Now we can further understand the ambitions of the CEO as he has invested his money in two other programs. Helion Energy, a fusion power start-up that required him to invest more than \$375 million and the other is Retro which asked for \$180 million funding. Altman made the investments in the same year. There are multiple startups who have been working on the idea of longevity in different verticals of healthcare and medical treatments. Betts-LaCroix's interest in cellular reprogramming involved techniques that could transform the cells to be younger through genetic engineering. Retro teamed up with the Chinese researcher, Sheng Ding, the developer of new ways to reprogram cells for the same. If the company achieves the said goal, the healthcare industry will have an avenue to build upon treatments for cancer and heart diseases. Apart from Retro there are other startups who are aiming to fight death, below is the list to explore their avenues of beating death and prolonging life. <https://dgigit.in/AltAI>

■ **APPLE STORE**

Tim Cook

On Wednesday, April 19, Apple Chief Executive Tim Cook met India's Prime Minister Narendra Modi and deputy IT minister Rajeev Chandrasekhar. Cook is visiting India to inaugurate the country's first ever Apple retail stores in Mumbai and New Delhi.

Tim Cook expressed his excitement about the upcoming visit on Twitter, "Hello, Mumbai! We can't wait to welcome our customers to the new Apple BKC tomorrow."

The visit foresees high ambitions from the organisation in the Indian market for smartphones where Apple has been actively increasing its assembly through contracts in India and has been boosting exports. iPhones are primarily assembled by Foxconn, Wistron and Pegatron. They are Apple's contract manufacturers and Apple aims to assemble iPads and AirPods, along with iPhones in India, the world's second-largest market for smartphones.

India Cellular and Electronics Association's data suggests that around \$9 billion (₹738 Crore) worth of exports of smartphones were established from India between April 2022 and February 2023 and more than 50 percent of the exports were under iPhones.

With the initiation of India's first Apple retail store, which will be located at the Jio World Drive mall in Mumbai's Bandra-Kurla Complex and its second store in Select Citywalk Mall in Delhi, Apple puts forth the clear idea of expanding its market in India and working extensively towards the manufacturing of its products. Currently, the Apple plant in India manufactures iPhone 14 and the older models of the variant but with the expansion, we can expect the plants in India to assemble Pro variants as well.

On April 18, the maiden retail outlet for Apple will open in Mumbai, which will see the arrangement for Mumbai Rising, a skillset series organised from April 18 to May 25.

The series aims at featuring local artists from various skills in the domains of film, art and music sharing and teaching these skill sets. Apple Music has already set up a playlist under the title Apple BKC, which is based on the city.
