Apps and services

In this day and age, there is an app for everything. Now, when we did our last Back To School issue in 2016, there was one app that stood out in a handful of offerings. However, over the last few years, in the world of apps, we have developed a problem of plenty. There are so many offerings in the market right now it takes a lot of time to single out one app that will help you get things done with ease. So, to save you all the time you'd spend going through app categories, we have compiled a list of apps and services, some free and some paid, that will help you level up your academic game, the geek style!

Office Lens

With schools and colleges shifting to hybrid mode after the dreadful pandemic, PDFs and other digital publications made their way into schools and colleges like water through the open gates of a dam. That was when Office Lens rose to prominence. As someone who recently graduated from college, more often than not, I found myself using Office Lens to search through scores of PDFs stored on my PC/phone, and make digital copies of my notes to send to friends. There are four basic functionalities that Office Lens comes with – Image to PDF conversion, Text to handwriting conversion, Image to Tables, and PDF editing. Obviously, it does not come

packing with all the bells and whistles of a full-scale PDF tool on your PC. But, its seamless integration with Office 365 and ease of use makes it the perfect choice for us, the digital nomads.
