

MindMeister

If you are a fan of making mindmaps for your projects or for studying, then MindMeister makes for a very tempting install. For many, mindmaps are a great way for visualisation, even I use them. But being old school, I prefer pen and paper, but MindMeister was the closest thing to my old school preference. Not changing sides this easily though 😊. Coming back to the app. If you are working with a bigger group, then you can also use the collaboration tools offered by the app to make sure that everyone is on the same page, literally and metaphorically. There are a few alternatives to the app as well, like Nice Mind, Simple Mind, etc., which also make for decent considerations in case you do not like this app. <https://support.mindmeister.com/hc/en-us>

Mathway

We know that ChatGPT and other generative AI tools that are out there on the internet can solve complex math problems in seconds, but their accuracy at

this time is something that deterred us from recommending them. Mathway is a tool that is designed to help you solve any algebra problem that you come across. Not only that, Mathway, since its inception has expanded into different branches of mathematics and science, with its features now including everything from calculus to chemistry. The best part that basic tier of this service is more than usable. It is only when you are looking for step by step solutions and some other niche stuff that you need to pay to upgrade.

Evernote

If there was ever a list about penning down stuff digitally, and it did not take note of Evernote, then my friend, you have the wrong list open. One of the first apps to master cross-platform note-taking and organisation, Evernote should be an app which I believe should come pre-installed on all devices capable of running it. The ease of

switching between devices, the ability to integrate Google Calendar, and web-page clippings into your notes make it one of the best apps available out there. Sounds too good to be true, right? You have to try it to believe it. And, if you want more, there are two paid tiers available for individuals as well, which bring along even more features and creature comforts that will make your life nothing but easier.

Opening the source

It wouldn't be wrong to say that open-source software are a boon for mankind, especially in this day and age. With paywalls stronger than the Great Wall of China blocking access for people to most services these days (don't start arguing about paywalls, we'll do it some other day), open-source software provides an alternative that, sometimes, is better than its paid counterpart.

If you are a student and not working with your finances like the best CA in the country, then I am sure, as a recent college graduate, that you are looking at ways to cut down on those
