

Key Features/Services

- Unified Network Security Gateway
- NextGen Intrusion Prevention System

Securonix

Securonix delivers a scalable cloud-native SIEM that enables a system for hybrid enterprises and is powered by analytics which provides flexible deployment options to optimise and makes the process cost effective. The real-world threats are deconstructed to provide actionable intelligence on adversary tactics, techniques, and procedures. Securonix was also awarded the Gold Winner for Security Information and Event Management 2023.

Key Features/Services

- Cloud Security Monitoring
- Amazon Web Services
- Google Cloud Platform
- Microsoft Azure
- Microsoft 365

Prophaze

Prophaze is one of the leading cyber security startups in India and its Prophaze WAF 3.0, has been recognised as the Most Innovative Product of the year 2022 by Data Security Council of India (DSCI). The platform is articulated to protect web applications and APIs against multiple threats inclusive of known and unknown threats. The platform achieves this with machine learning, hybrid architecture and real-time threat intelligence. The platform provides solutions for industries and cloud servers is the first real time automated cloud security product in India.

Key Features/Services

- API Security
- Layer 7 DDoS Protection
- Bot Mitigation
- OWASP TOP 10 Protection
- RASP | WAAP | WAF

Com Olho

Founded in 2019 by Abhinav Bangia the startup is a Gurugram-based cyber

security and IP-led analytics company and India's first company to win a patent for advertising fraud detection. The platform offers deep learning and clustering to understand enterprises' data and recognize fake formats. The platform provides end-to-end AI based solutions from procuring sources of malpractice, empirically identifying the fraud, and interpretation resulting in deterministic savings. The platform has won Patent for Digital Governance of Online Digital Assets in 2022 and aims at easing the cyber space for digital governance with the platform's suite of services.

Key Features/Services

- Ad Fraud Detection Technology
- Brand Safety API
- Digital Governance
- Space Technology

CloudSEK

CloudSEK, a cybersecurity firm with headquarters in Singapore and the majority of its business operations and engineering in India, foresees cyberattacks even before they happen by utilising their AI platform. CloudSEK was set up in 2015 by Rahul Sasi. The digital risk monitoring platform XVigil from CloudSEK serves businesses in a variety of industries, including banks, technology firms, healthcare providers, and retailers in the world. Additionally, it introduced BeVigil, a security search engine that enables users, programmers, and researchers to assess the security of its applications. BeVigil has more than 10,000 users, more than 400 corporate customers, and is now available for free in more than 20 countries at the time of writing.

Key Features/Services

- Cyber Threats Monitoring
- Dark web monitoring
- Brand Threats Monitoring
- Infrastructure Monitoring

Block Armour

Utilising SDP architecture and Block-

chain technology, Block Armour's Zero Trust system may provide business apps with fine-grained micro-segmented network access, regardless of if they are hosted on-premises or across one or more Clouds.

By strengthening authentication for users and encrypting user-server communication, the solution protects the server and offers end-to-end security, providing a comprehensive cybersecurity solution to safeguard the present hybrid and dispersed IT systems from next-generation threats. Additionally, the platform offers a mesh of end-to-end Zero Trust security for crucial infrastructure, connected IoT devices, and related communication networks, with a focus on security for Smart Cities, Industry 4.0, and 5G.

Key Features/Services

- Unified Secure Access
- Multi-Cloud Security
- Zero Trust for IoT

SecureThings

Vishal Bajpai founded Secure Things in 2018, which offers specialist machine learning-driven cybersecurity for all types of vehicles, including motorcycles, commercial vehicles, passenger cars, and electric cars. The automotive ecosystem receives thorough real-time security from its innovative six-layer protection solution. The startup for automotive cybersecurity is based in California, USA, and has a sizable R&D facility there to serve its current clientele in the India and Asia Pacific and Japan (APJ) markets. Through its five-pronged strategy for vehicle security, SecureThings.ai provides OEMs, Tier-I suppliers, and subsystem producers with end-to-end solutions for identification, reaction, recovery, verification, and protection using patented machine learning-based technologies.

Key Features/Services

- Automotive Cyber Security
- Security Assessment And Advisory ■
