

AI education vital to overcome AI-related job loss fears, says Digit Survey

Over 3000 respondents from India's student and working professionals' community share their fear, hopes and dreams about their future in the Age of AI

Digit, India's leading personal technology media brand, has published the findings of an innovative survey exploring the country's attitudes and reactions to the rapid pace of AI growth and its

potential impact. The analysis done by the Digit Research Lab aimed to evaluate India's general sentiment and response to the potential effects of AI related to the employment and education sector.

The survey, which polled 3,050 participants from 24th March 2023

to 10th April 2023, revealed that 59 per cent of Indians view AI as a mix of opportunities and threats, with 11% considering it a significant threat that could result in job displacement and increased competition. Students perceive the threat level even higher at 40 per cent, as opposed to working professionals at 36 per cent, according to Digit's findings.

"The results of Digit's survey highlight the critical role that AI is set to play in shaping India's future and the importance of equipping our workforce and students with the necessary skills to succeed in an increasingly AI-driven world. Although there are concerns about the potential risks of AI, the opportunities for growth and innovation are enormous. Digit is thrilled to demonstrate the power of AI tools such as ChatGPT by creating an entire issue of our magazine using this cutting-edge technology. We are excited to witness how AI will continue to transform the way we work and learn," says Vikas Gupta, Founder, and Director of 9.9 Group.

India believes AI literacy is crucial for future

The Digit survey also disclosed that 67 per cent of the respondents had a high familiarity with generative tools like ChatGPT. Meanwhile, 23 per cent reported moderate familiarity, and a mere 10 per cent indicated no familiarity. The study also determined that 75 per cent of respondents believed their career growth would be hindered if they did not acquire knowledge in AI, machine learning, and related fields.

On an optimistic note, 62 per cent of Indians acknowledge the substantial role of AI in personalised and expedited learning processes via targeted feedback. The survey also discovered that respondents believe the Indian education system should give priority to developing critical thinking and problem-solving skills (54 per cent), building strong digital literacy found-
