

MediaTek | 5G SoC
GROUNDBREAKING HIGH SPEED 5G

Innovative 7nm FinFET
Built on the cutting-edge 7nm production process for big energy savings in a compact package.

New AI Architecture
Sports an all new AI processing unit. APU 3.0 supports advanced AI applications, including imaging.

Powerful Multimedia & Imaging Performance
Supports 4K video encode/decode at 60fps and super high resolution camera (80MP).

Multi-mode 5G chipset, with MediaTek Helio M70 5G modem built-in, boasts 7nm process and newest CPU, GPU and APU technology for a big power boost and super-fast connectivity

Latest CPU Technology
MediaTek's 5G SoC is a performance powerhouse with new Arm Cortex-A77 CPU.

State-of-the-Art GPU
A robust new Arm Mali-G77 GPU for extreme streaming and gaming experiences at 5G speeds.

Speedy Throughput
A peak throughput of 4.7Gbps download (sub-6GHz) and New Radio (NR) 2 Component Carrier (CC) support. Supports non-standalone (NSA) and standalone (SA) 5G network architectures.

MEDIATEK

think the semiconductor industry has challenges like, if we leave it on the chip shortage issue which is past us, but there are always macro cycles which happen. Right now, if you see as a macro situation globally, there is some moderation of businesses everywhere. So that is one challenge which the semiconductor industry is facing and they are part of that industry.

But if you look at maybe a longer term view, I think the challenges involve things like skill shortage. And of course, the other challenge is that this industry has a very short lifecycle. So if you see the devices that we have at home or in our hands, the replacement cycle is quite fast. And also the innovation is required because it's cutting edge. I think they are happy challenges. I think I won't complain. It really keeps us on our toes and we always want to take the next step.

Q You actually spoke about your latest launch, the Dimensity 9200+ SoC. Can you tell us more about the architecture of this chip and how it will push performance further in the smartphone market?

A So, you know, the MediaTek Dimensity 9200+ is our greatest and the latest

chipset that we launched and it's going to power very awesome phones very soon. And so it has, you know, multiple aspects, right. First of all, it is built on 4-nanometer process that itself brings a lot of efficiency and a lot of computing power in the hands of the user. And apart from that, it has great multimedia qualities, great camera support. And so I think the end user experience will be really awesome.

Q So does MediaTek plan on sourcing chips in India locally in the future? And do you have any comment about the country's PLI scheme for semiconductor manufacturing?

A I think the government has done a fabulous job in creating this ecosystem because it's not only about fab, you know, foundry itself, I think that's the huge step which is going to happen. Right. Apart from that, you know, in the last four, five years, a lot of groundwork has been put in.

You know, we had PLI scheme for smartphone manufacturing and other components and other electronic products. So that has slowly and steadily created that ecosystem, which is necessary for the whole industry to

flourish. Of course, the PLI scheme for the fab manufacturing is the kind of the last step, right. Which is we are really waiting with bated breath, right. When that happens. So, but it is looking very, very exciting and very, very feasible that it is going to happen. So indirectly we benefit a lot. As in when this semiconductor ecosystem builds up, it's a great advantage for Mediatek, although Mediatek is a fabless company.

But, you know, whenever this happens in India, I think it'll be a great thing for us to look at and we'll see if that is able to satisfy our needs, which I'm sure it will.

Q I have one last question. In the last year, what has been one technology that has wowed you completely?

A That's a tough question. You know, from MediaTek point of view, I think I would say the 5G itself is a very awesome technology, which I can keep talking about. This is going to revolutionise the way we work.

And if you look at the Indian ecosystem, you know, we have like 100 unicorns in the startup ecosystem and they have so far relied on 4G. So this 5G will unleash a new wave of innovations. **d**
