No more lost phones?

The Department of Telecommunications (DoT) will be deploying the Central Equipment Identity Registry (CEIR) system.

This CEIR system will let you trace lost phones, believe it or not. While the system was introduced across states and union territories in March, the actual deployment is to take place starting May 17.

What is CEIR?

In simple terms, the initiative is to let the users of smartphones block their device in case of theft or when the device has been lost.

You need to connect your device and add in preliminary details on the CEIR website or use the KYC application which is made available on the Apple store and Play store. The government will track down your

device and retrieve it. Once you have procured your device you can simply unblock your cell phone. This system is introduced to prevent any data or privacy breach upon the loss of the device. The citizen can easily track their device and maintain security for their personal information.

To add in your details and register your smartphone with the CEIR system you can visit their website. Whenever someone tries to operate a blocked cell phone the tracking system takes a notice of the movement and the officials are made aware of the device's location. A statement from Chief Executive Officer and Chairman Project Board at CDoT, Rajkumar Upadhyay to PTI suggested that the system is ready for pan-India usage.

"The system is ready, and now it will be deployed across India, in this quarter. This will enable people to block and track their lost mobile phones. One of the common practices is that miscreants change the IMEI number of stolen mobile phones which prevents tracking and blocking of such handsets. It was a national security issue. The CEIR will be able to block any cloned mobile phones on the network with the help of various databases." **d**

iPhone 15 will be assembled in India

Recent reports from TrendForce reveal that Tata Group is all set to become the fourth iPhone assembler for Apple. The pandemic has forced Apple to diversify its supply chain and take this step ahead. So, the iPhone 15 and the iPhone 15 Plus is believed to be assembled here in India and Tata has all the rights of distribution all

across the country. There are four iPhone assemblers now- Foxconn, Luxshare, Pegatron and Tata Group.

So, TrendForce has also given a distribution pattern of the iPhone Series Assembly Orders from these 4 companies. Tata's entry in the iPhone assembly also indicates Wistron's exit.
