Powerful Edge Computing with LIVA Mini PC

In the business landscape of high-rising volume data processing, edge computing advances the business executive's decisions and optimizes the ability to analyze data in near-real time. It takes computing and storage capabilities to the edge of the network to enhance reliability.

The LIVA Z3 Mini PC, powered by Intel® Pentium® & Celeron® processors, provides higher connection speeds up to 10 Gbps and greater efficiency of data transmission. It helps businesses achieve powerful, efficient edge computing for various applications like factory automation.
