

HP Pavilion x360 14 (2023)

Portable, efficient, and versatile

If you're someone with a budget of ₹90,000 to ₹1,00,000 and are looking for a thin and light 2-in-1 laptop with privacy-focused features, then this review is for you.

DESIGN AND BUILD QUALITY

HP has gone one step ahead and has manufactured the Pavilion Plus x360 using recycled aluminium and reclaimed ocean plastic. The laptop's chassis has almost no flex. And since most people will use this 2-in-1 laptop in the tablet mode, or the creative mode, HP has outfitted this thing with a very solid hinge. The laptop features an ergo lift design, so it lifts its bottom up for some airflow. The laptop's lid features a manual physical shutter button which covers the front 5MP camera.

The laptop I had, had a 'rose-ish' colour, and HP calls it 'Palm Rose Gold.' The HP Pavilion Plus x360 14 is also available in silver colour.

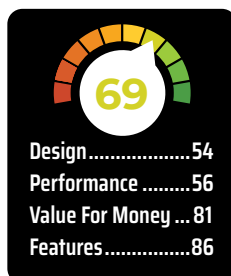

KEYBOARD AND TRACKPAD

The HP Pavilion Plus x360 14 features a 60% keyboard, which feels very good to type on as well, primarily because the keys have good travel to them and the deck's chassis is very solid. The surface of the keys is absolutely flat and if you've ever used an HP thin and light before then these keys also have similar spring action, which is to say, adequate. I like the trackpad on this device. All its sides are at the same height and therefore each click feels very precise. And therefore, the trackpad does not wobble when you press it, making it great for everyday use.

SCREEN, SPEAKERS, AND CAMERA

The HP Pavilion Plus x360 14 comes with

₹92,500

a 250 nits 2-in-1 display. The screen's refresh rate is limited to 60Hz and that is enough for the kind of use case this laptop is for. The on-screen bezels are decently thick and the 5MP front camera offers superb camera quality in all lighting conditions. It can

also record at a maximum resolution of 1440p, which is great for when you want to attend online meetings.

The laptop only covers 63 per cent sRGB, 47 per cent DCI-P3, and 47 per cent Adobe RGB colour spectrum. Because of this, the on-screen colours will look a bit washed out. Likewise, the average Colour Delta E value is 7.07 for the display. Just like the screen, the speakers on the x360 14 are also decent and most suitable for the use case. They're decently loud at high volume and the sound profile is balanced, and most every type of content sounds extensive and loud.

PERFORMANCE

Beating at the heart of this laptop is an Intel 13th Gen Core i5-1335U a 10-core chip featuring 8 efficiency cores and 2 performance cores. It is paired with 16GB DDR4 memory instead of DDR5 sticks. The U series Intel chip powering this laptop is geared toward power efficiency.

Meaning, it is designed to deliver high battery life. Therefore, it keeps the power consumption in check. Even when I put the laptop in 'best performance' mode and plugged in the power, the chip continued to sip between 15-20W during the intense Cinebench R23 benchmark. The 1335U did provide some bursts of power but it quickly reduced power consumption soon after. Likewise, the CPU Package [°C] hovered between 80-90 °C during the entire test. I also ran Cinebench R23 and the chip's score during the initial run was around 7500 and it dropped below 6300 points post the 10-minute throttle run. In terms of real-world usage - most tasks will run smoothly. I even tried some amateur video editing on this chip and it performed decently well. I was able to scroll through the timeline, and import and export 4k files with ease. It was only when the timeline became 10 minutes long that the chip started to struggle. The Intel Iris Xe GPU is best suited to play ultra-low demanding titles and other games that don't demand a discreet GPU. The iGPU is designed for HD and 4K video playback, basic photo, and video editing, and other light workloads.

VERDICT

The HP Pavilion Plus x360 14 seems like a solid option for those looking for a thin and light 2-in-1 laptop with privacy features. The use of recycled aluminium and reclaimed ocean plastic is commendable, and the build quality seems sturdy. The high-precision trackpad and decent speakers are also a plus. However, the average gamut coverage and colour accuracy of the display may not be suitable for professional photo and video editing. Overall, it's a good choice for office and productivity tasks..
