

Laptops

Ultimate productivity on the go!

Manish Rajesh | manish@digit.in

The best laptops in India offer everything that you might need from a laptop. This includes a combination of great performance, battery life, and a build and design that's most convenient for the user. The laptops we've included in this list of the best laptops in India cover a wide range of use cases, form factors, and budgets. We've got both of Apple's laptops here, including the MacBook Air M2 and the MacBook Pro 14 M2 Pro. We've also got convertibles, or 2-in-1 laptops, like the Samsung Galaxy Book3 Pro 360 and the Lenovo Yoga 9i, and premium thin and lights like the Dell XPS 13 Plus. Powerful mainstream laptops, with large screens are also included in this list, like the LG Gram 17, or the budget all-rounder, the Acer Swift X. Hopefully, this list will help you find the best laptop to suit your needs.

Apple MacBook Air M2

The new Apple MacBook Air with the faster M2 chip is a powerful daily driver. This is an update to the already fantastic M1 chip; we could actually have included the

M1 MacBook Air on this list as well, and it's still an option if you're looking for a cheaper alternative to the MacBook Air M2. This laptop offers fantastic everyday performance paired with great battery life. The new M2 variant of the MacBook Air offers a slightly bigger and brighter screen as well as a higher res webcam. The base model of the MacBook Air comes with 8 GB of RAM, 256 GB of storage, and an 8-core CPU and GPU. Don't let the core count fool one, the machine is very-well optimised, so while it may look like there's fewer cores than other AMD and Intel processors on this list, you will still get excellent performance out of this laptop.

Galaxy Book3 Pro 360

The Samsung Galaxy Book3 Pro 360 is the best premium 2-in-1 laptop we've tested this year. The laptop comes with a 16-inch 3K display with a 16:10 aspect ratio, which is quite common in creator laptops, allowing for more

real estate on the screen when working on projects. In our testing, we found the the display to be bright at 415 nits, and we got an sRGB and DCI-P3 coverage of 100%, making this an excellent machine for

your content creation needs. Of course, the 16-inch display is also fantastic for consuming content. The laptop comes with a 13th gen Intel Core i7-1360P, which is a powerful mobile processor with 12 cores. However, it does fall a bit short in multi-thread performance of last year's i7-1280P because of its lower core count. That being said it is still a very fast and powerful processor. This is paired with 16GB of LPDDR5 RAM clocked at 6400 MHz, and 1 TB of NVMe SSD storage. You've got great I/O support as well, including two thunderbolt ports making this is a great package for anyone looking for a capable 2-in-1 laptop.

LG Gram 17

The LG Gram 17 features a 17-inch display, like the name suggests, but manages to be surprising lightweight and portable despite the large screen. The 17-inch screen features

a 16:10 aspect ratio display, with a resolution of 2560x1600, and an advertised 100% sRGB, DCI-P3 coverage, which is excellent for content creation. This laptop features an Intel Core i7-1360P, which is the same as the laptop above, with 12 cores and 16 threads. If that wasn't enough, the laptop also comes with an NVIDIA RTX 3050, making this an excellent creator laptop. While the RTX 3050 is a relatively weaker GPU in NVIDIA's 30 series, its presence greatly boosts the LG Gram 17's content creation capabilities when it comes to tasks like video editing and rendering, which the 1360P would have struggled with on its own. If that wasn't enough, the new LG Gram 17 comes with up to 32 GB of RAM and 2 TB of NVMe SSD storage, making it quite a deal for content creators looking for a lightweight laptop with a large display.
