

5G smartphones in all budgets

Fastest speeds for the right price

5

G is arguably the most in-demand features at this point. Before 5G was rolled out in India, it was mostly limited to premium or high-end smartphones. However, with the widespread use of the technology, we now have good 5G smartphones for every budget. Here are some of our favourite 5G smartphones in every budget:

Apple iPhone 14 Pro Max

The Apple iPhone 14 Pro Max tops the best 5G smartphones in every budget list purely because the smartphone supports the most amount of 5G bands on any smartphone. The Apple iPhone 14 Pro Max comes with 22 5G bands,

along with everything else you get with the best iPhone in the market.

The Apple iPhone 14 Pro Max, while being last year's flagship, still holds the highest Geekbench score in all the flagship smartphones we have tested at Digit so far. The iPhone 14 Pro Max also comes with a Dynamic Island, which replaced the notch in the iPhone 14 Pro models, along with a new 48-megapixel shooter, which clicks sharp, detailed, and colourful images. We also get Apple's ProMotion display which is basically what the company calls its adaptive refresh rate tech (up to 120Hz).

Samsung Galaxy S23 Ultra

Samsung Galaxy S23 Ultra comes second as the smartphone holds the most amount of 5G bands on any Android device. The Samsung Galaxy S23 Ultra uses 16 5G bands, which gives the smartphone a larger 5G coverage than many other options. The Samsung Galaxy S23 Ultra is this

year's Ultra-flagship for Android, and comes with a custom Qualcomm Snapdragon 8 Gen 2 chipset paired with 12GB of RAM. The custom Snapdragon 8 Gen 2 on the Galaxy S23 Ultra basically has a higher clock speed as compared to other Snapdragon 8 Gen 2-powered smartphones. This helps the Galaxy S23 Ultra achieve a higher single-core speed than its rivals.

We also get Samsung's best camera chops with the Galaxy S23 Ultra. The smartphone comes with a quad rear camera setup including a new 200-megapixel primary Samsung ISOCELL shooter, a 12-megapixel ultra-wide angle lens, a 10-megapixel telephoto shooter, and another 10-megapixel periscope telephoto shooter. The camera on the Samsung Galaxy S23 Ultra is one of the best on any smartphone, just not as elaborate as we have seen from some competing smartphones recently.

Xiaomi 13 Pro

Xiaomi's flagship for this year, the 13 Pro isn't only the first smartphone with Leica-powered cameras to come to India, it comes with a wide 5G coverage of 15 5G bands. This is right below the Samsung Galaxy S23 series. The Xiaomi 13 Pro's Leica-powered camera

setup is also one of the first in India to come with a 1-inch type sensor. We get a 50MP Sony IMX989 shooter with a 1-inch type sensor, a 50-megapixel telephoto lens, which has a floating lens technology that allows the telephoto to also act as a macro shooter. Further, there is a 50-megapixel wide angle shooter. The camera on the Xiaomi 13 Pro is elaborate, to say the least.

Other things on the smartphone include a top-spec Snapdragon 8 Gen 2 chip, 12GB of RAM, and a fantastic 6.73-inch curved LTPO AMOLED display. We also get support for Dolby Vision and HDR10+ which makes watching movies and TV shows on the Xiaomi 13 Pro a delight. The only drawback here is that the smartphone is very heavy and you won't be able to hold it for too long while viewing content.
