

Smart TVs

They are getting smarter by the day

Deepak Singh | deepak@digit.in

When it comes to shopping for a high-end TV, it can be daunting to navigate the multitude of options available in today's market. With an increasing number of brands and technologies to choose from, finding the TV that best suits your needs and preferences can be a challenge. However, there are several great options available that deliver superior picture quality, advanced features, and cutting-edge connectivity. Among these options are the Sony BRAVIA XR A95K, LG G2, Xiaomi OLED Vision, Samsung QN95B Neo QLED, and more, all of which offer stunning displays, impressive HDR performance, impactful audio, and an array of features designed to enhance your viewing experience.

Sony BRAVIA XR A95K

The Sony A95K, winner of our Zero1 Award for Best OLED TV of 2022, is currently the only QD-OLED TV that you can buy in India. In

comparison to the white OLED TV panels found on most conventional OLED TVs in 2023, QD-OLED offers higher peak brightness, a wider colour gamut, and higher colour volume, resulting in bright highlights as well as astonishing details in dark scenes in HDR content.

The Sony A95K handles motion blur remarkably well. Another interesting highlight is that the buttons on the remote automatically light up in a dark environment for convenient usage. Additionally, Sony includes a Bravia cam for video calling that can be mounted at the top of the TV. It also comes with Sony's Acoustic Surface Audio technology which makes the sound from the 60W audio system appear to come directly from the screen.

LG G2

The LG G2 comes with LG's OLED Evo panel, which has an additional heat sink that allows it to achieve higher brightness levels compared to

other previous-generation OLED TVs. As of today, this is one of the brightest OLED TVs available in India, since the 2023 models such as LG G3 with MLA OLED are not yet available in the country.

Apart from the impressive OLED contrast, there are many other features to look forward to on this high-end TV. The LG G2 runs on LG's proprietary WebOS interface, which is compatible with all major smart home ecosystems, including Amazon, Apple, and Google. Additionally, it supports all popular HDR formats, and the 4.2Ch sound system delivers a total output of 60W. With 4 full-bandwidth HDMI ports, HGiG mode, and support for 4K 120Hz Dolby Vision gaming, LG G2 is also a very attractive option for gamers.

LG C2

LG C2 falls a tad short of LG G2 in terms of peak brightness, but other than that offers a similar experience as its pricier sibling. This is a great TV for watching

movies and TV shows as well as for gaming. It is available in a number of sizes ranging from 42 inches to 83 inches, which means you can pick whatever size best suits your needs and budget.

The TV supports popular HDR formats including HDR10+ and Dolby Vision IQ. Unlike the LG G2 which is designed for wall mounting, the C2 also ships with a TV stand for mounting it on a table. If you are looking for a more competitively priced LG OLED, you can also consider the LG A2 series.

Xiaomi OLED Vision

Xiaomi's OLED Vision is now a tad more expensive than it was at its launch, but it's still a great option if you are looking for value-for-

money OLED TVs for watching multimedia content. The high-contrast OLED panel and the metallic body give it a premium finish. Both Dolby Atmos and DTSX audio are supported for an immersive surround sound experience.
