

Smartwatches for men

Getting those miles in!

G S Vasan | feedback@digit.in

For centuries, men have been interested in wearables that show time as they help us better manage our daily activities and have a positive attitude towards life. This relationship became evermore personal once these portable timepieces became smart. The so-called smartwatches let us stay connected to the world and track fitness. Generation after generation, they have gotten better at gauging crucial men's health conditions and well-being cues. Today, we have smartwatches like Pixel Watch that can monitor Electrocardiograms. Fitbit Sense can well sense your stress levels from an electrodermal (EDA) sensor. Garmin watches take activity monitoring to the next level. And the iPhone maker not only seems eyeing healthcare way too seriously but also is taking on the competition with something like the Apple Watch Ultra. Now, even if you aren't curious about these stats, and want something stylish from a traditional sense, there are options for that too. Case in point: the Tag Heuer smartwatch that's listed below.

So, you see there are so many smart wristwears out there and choosing the right one can be overwhelming. Well, we are here to help you out. Let's check out the best smartwatches for men based on factors like design, features, tracking performance, battery life, etc. And we won't just jump into the roll call. Rather, start with answering some of the queries you may have about smartwatches.

Apple Watch Ultra

Men generally have a larger wrist circumference and Apple Watch Ultra is one chunky smartwatch that brings capabilities that sports enthusiasts and athletes would want. But even a regular man can ignore those aspects of it and use its dependable tracking features and smart utilities. It is

made of an aerospace-grade titanium body, a durable build, a large bright sapphire crystal glass front, a special button arrangement for ease of use, a stupendously long battery life,

dual-frequency GPS for one of the most accurate positioning while you go into remote terrains, and when you need help, its orange colour and the option to raise an 86-decibel siren could prove life-saving. We haven't yet taken into account, the features of the Apple Watch Series 8 like crash detection, emergency SOS, both GPS and cellular connectivity, etc that make it even more powerful and appealing to regular and power users alike. However, if you are more regular and want something simpler, then you have the vanilla Apple Watch.

Apple Watch Series 8

Although it's very similar to the Series 7 in looks and features, it's the latest Apple Watch and that means one extra year of software support. The newest features include car crash detection, crack-resistant front glass, IP6X dust resistance, and WR50 water resistance. In our experience, this

is the best mix of smart features (that act as a great smartphone companion, a computer on its own) and class-leading fitness and health tracking. Both Apple watches work with the Apple ecosystem only, but the integration is so seamless.

Samsung Galaxy Watch 5 Pro

Samsung has thrown the kitchen sink and more at the Galaxy Watch 5 Pro (here's my experience). It is packed to the brim with features like GPS routing, swimming and plenty of workout modes, snore detection whilst sleeping, a Body Fat Composition analyzer, and in select markets, a blood pressure monitor as well as Google Assistant support. This is a giant watch and comes with a build comprising of titanium alloy chassis, Sapphire Crystal glass face, MIL-STD-810H endurance rating, and IP68 ingress protection. If you want pretty much this offering but in a more modest build, go for the Galaxy Watch 5.
