

22 TIPS TO SUPERCHARGE YOUR LAPTOP

Tips to help your laptop speed up
and run smoothly

Druti Banerjee | feedback@digit.in

No matter how high end laptop you purchase, after a certain point of time it is bound to face lags and slow down its pace. But that doesn't mean you abandon it. You might start experiencing the difficulties anytime be it years later, months later or just days after purchasing the laptop. There's always a solution to any problem and for this I have 22 solutions for you. You can try out any and every point mentioned hereafter to give your laptop a boost. Let's take a deep dive and find issues.

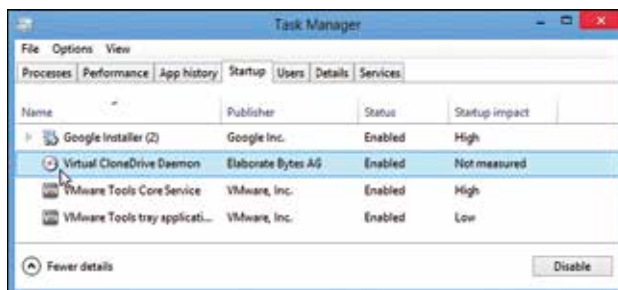

01 Disable Startup programs

Startup programs, as the name already suggests, start as soon as you turn your laptop on. Make sure you keep a check on the auto-start programs and fix it by closing

all. You never know how many apps run in the background and cause the lag. So, simply disable all the programmes that have been doing this to avoid unwanted problems on your laptop.

02 Clear up Disk Space

Cluttering of your laptop eventually slows down your laptop. More the space is occupied in your laptop, the more it will eventually slow down. So, the best way is to keep a check on what you are storing in your laptop so it doesn't cause much of an issue. The

best precaution would be using a Disk Cleaner or Disk Cleanup software.

03 Uninstall unnecessary programs

Unused programs just stay and mess with your laptop's storage and also at times can cause various security issues. So, the best way is to get rid of such programs by uninstalling them. You can easily go to your control panel, tap on uninstall a programme and then right click on the programme you want to uninstall. That's it. The unused and unnecessary program will be gone from your laptop.

04 Change the laptop's power plan

Power plan of a laptops are generally set at balanced by default. So, this makes your laptop slow down eventually as an effort to save energy. The best thing to do at this point would be to change the settings to high. This would definitely speed up your laptop, but keep in mind the toll that your battery would take.

To change the settings, go to the control panel on your laptop, there you'll get the option of View by. Once you click on that, a drop down menu appears. There you will have to select large icons and next click on Power options. The last menu appears where you have to select high performance and your job is done.

05 Update the drivers

When your device driver is outdated or maybe for some reason faulty that is when you can face lag on your laptop. You have to make sure that your drivers are compatible with your hardware devices. You can either decide to manually or automatically get the perfect drivers for your laptop. Here is how you can do that -

Manual driver update - Go to the manufacturer's website of your laptop and look for which is the recent compatible driver. Compatibility of the
