A folding future

In conversation with **Damyant Singh Khanoria, Chief Marketing Officer, OPPO India**, about the company's latest OPPO Find N2 Flip clamshell foldable phone that has made its way to Indian shores

Dhriti Datta | dhriti@digit.in

Foldables and rollables are all the rage in the smartphone market right now as we saw evidently at the Mobile World Congress in Barcelona this year. Alternative form factors give smartphone enthusiasts something exciting to look forward to and are a shift from the same old candy bar form factors that smartphones have had since their inception. We spoke to Damyant Singh Khanoria, Chief Marketing Officer,

OPPO India about the new form factor and their latest endeavour at a folding phone – the OPPO Find N2 Flip. With the OPPO Find N2 Flip being sold in the Indian market, we spoke about the target audience, foldables' durability, R&D into alternative form factors, and much more.

Q The OPPO Find N2 Flip is an impressive looking foldable smartphone. It is one of the most impressive clamshell foldables to launch in the Indian market

especially with the outer screen integration. So, what went into designing this device and what are the learnings for future foldables from OPPO?

A At its outset, the folding project started for us in 2018 and the intention was to solve for a new form factor. We didn't want a foldable device just for the sake of having one, but to have a phone that could be your daily driver. That essentially meant it would answer to a very high standard, in terms of durability, screen experience, the integration of apps, and lastly in terms of just the way the form factor was. With the integration of the outer screen of the OPPO Find N2 Flip, we attempt to deliver an experience that truly feels special and very "OPPO". So, if you talk about the Find N2 Flip, the battery life is by far the best in the industry, it sets the benchmark in terms of fast charging as well. The camera experience, again, with our partnership with Hasselblad, basically means you have an outstanding camera experience. So for us, we've not tried to bring a device to market earliest. For us, it's really about being the best rather than being first. And philosophically, that's the product that we bought out.

Q With regards to foldables in India – especially a clamshell foldable – what is the target audience you're looking at and what would be the demographic?

A We spent a better part of the last four and a half years just thinking about this. The audience obviously will be people on the vanguard of tech, people who are wanting to experiment with new form factors. I think the target audience from an age standpoint is usually like 25 to 40-year-olds and people who are really tech enthusiasts. But we found over the last year and a half there's a real need to move away from the standard bar phones. And so we feel this audience is growing. This audience
