JioPhone 5G leaks

JioPhone 5G images leak, giving us a close look at one of the most anticipated 5G smartphones. Besides the JioPhone 5G's design, we also learn about its possible price and launch timeline. The leak comes from a Twitter handle @ArpitNahiMila who seems to have got hold of the device and reveals some of the aforementioned details. Come, have a look:

On the back of the phone, there is the Jio logo in the middle and a vertical pill-shaped camera island. Within the camera panel, we see the 13MP sensor mentioned. Arpit adds there will be a 2MP secondary sensor too.

The back also has got the 5G branding and the phrase, "ultimate speed, unlimited experiences". On the other side, we see a waterdrop notch display. As per previous rumours, this

could be a 6.5-inch LCD panel. Arpit claims there is a 5MP selfie shooter inside that cutout. On the screen, we see the results of a 5G speed test. The download speed is shown to be 470.17 Mbps and the upload speed is 34.25 Mbps. JioPhone 5G is said to be running on a Unisoc processor or the MediaTek Dimensity 700 chipset. This could be coupled with 4GB of RAM and 32GB of storage.

The software could be Pragati OS (based on Android) co-developed with Google. For unlocking the device, we may get a side-mounted fingerprint reader.

Launch date and price

The leaker predicts JioPhone 5G could launch in India between Diwali and New Year. It is expected to be priced below ₹10,000. Last year when this was announced, Ambani professed this would be the "ultra-affordable 5G smartphone" with Jio's private 5G stack and 5G-enabled solutions for India as well as the global market.

Now, ₹10,000 isn't an accessible price point for every Indian and so, Reliance will have to price it lower than any other 5G phone. Jio could introduce 5G to many new users.

Should Samsung be worried?

The OnePlus V Fold's specs and design have leaked. So, we now have a good picture of what the OnePlus foldable will look like and most of what it will be bringing to the table. But could it pose a threat to Samsung's dominance in the foldable market, with the launch of the new Galaxy foldable looming near? Although we still don't know a lot about these two folding phones, here's what we think based on the details we have. Starting with the design, the

OnePlus V Fold renders by OnLeaks (via Smartprix) suggest a Vegan Leather back, which should be a different offering from the rest of the glass slabs. It

should also offer better durability compared to glass. Even Gorilla Glass can have a trade-off between scratch and drop protection. Additionally, if the device is lighter because of the new Vegan Leather material and other reasons, that would be appreciated by buyers. <https://bit.ly/SamWorry>
