Intel starts a rebranding initiative

Intel is set to rebrand its entire lineup of client processors for both desktop and laptop devices. This significant shift marks the most extensive brand update in 15 years for the tech giant, with changes slated to go into effect from the start of the second half of 2023. The rebranding initiative will also extend to the vPRO processor lineup, which is primarily aimed at enterprises. The first processors to be impacted by this shift will be the Meteor Lake proces-

sors, which were initially intended to bear the label of Intel's 14th Gen Core processors.

The aim of this rebranding effort, according to Intel, is to introduce a

level of simplicity to the processor portfolio's nomenclature. However, early reactions to some of the proposed changes suggest that they might complicate, rather than simplify, processor identification.

Intel maintains that the rebranding reflects an important shift in its client roadmap, promising further details in the near future. The tech giant aims to simplify processor naming, but some changes may lead to confusion.

iPhone 15 price estimates are predictable

Apple iPhone 15 series could be pricier than its predecessor, as per Wedbush analyst Dan Ives. He told CNBC that the average selling price of the iPhone 15 lineup will touch \$925 (~₹76,300). What's interesting though is he estimates there is still demand for the new iPhones year on year!

Nothing releases a new iconic ringtone

Nothing has announced their new Glyph ringtone pack composed by the Swedish House Mafia. This will be launching with Nothing OS 2.0 on the Nothing Phone 2. This made us muse about the role music plays in smartphone branding. We think Apple's and Nokia's original ringtones are likely to have the most recall value for most of us.
