

Samsung Galaxy F54

Mid-range camera revolution?

The Samsung Galaxy F54 5G has been launched as the new mid-range "revolutionary camera sensation" from the brand. With a focus on the camera, and a design that is in-line with the company's more premium A-series and S-series smartphones, the Samsung Galaxy F54 5G looks the part - A regular Samsung smartphone from 2023.

With mid-ranges, however, Samsung doesn't really have a good record in terms of matching the experience that the brand's more expensive flagships or high-end smartphones offer. With the Samsung Galaxy F54 5G, the brand aims to change just that.

With features like astrolapse and a 120Hz super AMOLED display at a sub-Rs 30,000 price, the Samsung Galaxy F54 5G does offer things that Samsung isn't really known to offer.

Now, I used the Samsung Galaxy F54 5G for a couple of weeks and here is what I think about the device:

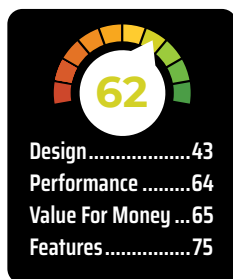

DESIGN

This year, Samsung is taking a more streamlined approach with the design of all its smartphones. With the Samsung Galaxy F54 5G, the company has carried on with the same approach and the Galaxy F54 5G looks pretty much like every other Samsung smartphone that was launched this year.

We get a glossy back panel, with the cameras protruding out of the back panel itself, similar to what we have already seen with the Samsung Galaxy S-series and the Galaxy A-series smartphones that have launched in 2023 so far.

The Galaxy F54 5G, however, has

₹29,999

a glossy finish on the back panel, which makes the device a bit of a fingerprint magnet and it scratches rather easily.

Up front, things are again pretty familiar.

We get a hole-punch display with minimal bezels. The chin, however, is a little thicker, which doesn't really give an end-to-end feel, but that is something we have witnessed on pretty much all the smartphones in this range.

The screen's orientation is a bit on the taller side and we get the volume rockers and power button on the right side of the frame. The sim tray is located on the left side of the frame. At the bottom, we have the speaker grille and the USB type-C port, and up top, there is nothing apart from a mic.

Overall, this design approach brings the more affordable Samsung Galaxy F-series in-line with other, more premium Samsung smart-

phones. Now, this isn't exactly a good or a bad thing, because while it makes all Samsung smartphones similar to each other, it also puts the Galaxy F-series right up there with the brand's flagships, at least in terms of the looks.

DISPLAY

The display on the Samsung Galaxy F54 5G is also very good. We get a nice Super AMOLED panel with a 120Hz refresh rate. The display on this smartphone is pretty good. Since this is a Samsung, there is no doubt the display quality is very good.

The colours are nice and vibrant and the details are crisp and sharp. I watched several YouTube videos and used a bit of social media on the Samsung Galaxy F54 5G, and never did I feel any lack in terms of colours or details during my brief usage of this smartphone.

The Samsung Galaxy F54 5G also supports HDR, meaning watching content on apps like YouTube and Netflix is a supreme experience on this smartphone. This is one of the few devices in this range that offer HDR support, which makes the Samsung Galaxy F54 5G a pretty solid deal, in terms of the display we get for the price.

The display also feels very responsive with the 120Hz refresh rate. We get two settings - 60Hz refresh rate and 120Hz refresh rate. There is no adaptive setting, but at 120Hz, the display feels absolutely slick and smooth. The smartphone also runs games like Battlegrounds Mobile India and Call of Duty: Mobile on high frame rates, which is good for our mobile gamer friends out there.

We also did a Lux Meter test on the Samsung Galaxy F54 5G to test the device's brightness.

Here, the Samsung Galaxy F54 5G showed a maximum luminance of 636 nits and a minimum luminance of 4 nits, which is pretty good range. Of course, this is an AMOLED display so this was somewhat expected.
