

PERFORMANCE AND BATTERY

Performance wise, the Samsung Galaxy F54 5G is powered by an Exynos 1380 SoC paired with 8GB of RAM. We also get a massive 6,000mAh battery, which is one of the highest on any smartphone in this range. Now, the Samsung Galaxy F54 5G feels pretty decent in terms of how the smartphone performs or handles different tasks. The smartphone's benchmark numbers, however, are a bit lower than expected, as compared to some of the competing devices in this range.

For example, on AnTuTu, the Samsung Galaxy F54 5G scored 506,452 points, which is lower than the likes of the Moto Edge 40, the Poco F5, the Vivo V27 Pro, and more, but the smartphone scores higher than smartphones like the Oppo F23 5G and its cousin, the Samsung Galaxy A34 5G. On Geekbench, the Samsung Galaxy F54 5G scored 1006 points in the single-core test and 2841 points in the multi-core test. This, again, is not the highest in this range, but it's pretty good for any smartphone in this range.

In GPU-based benchmarks also, the Samsung Galaxy F54 5G puts out decent numbers. For example, in the 3D Mark Wildlife test, the Galaxy F54 5G put out a score of 2829 in our tests, which is not the highest, but enough to smoothly run all kinds of games you'd ever want to play on your smartphone.

In GFXBench, the Samsung Galaxy F54 5G held its own among competing devices like the Oppo F23 5G and Samsung Galaxy A34 5G, but of course, was much lower than more performance-centric devices like the iQOO Neo 7, the Poco F5 and the likes in the same range.

In terms of battery, the Samsung Galaxy F54 5G comes with a huge 6,000mAh battery, which is one of the largest we get on smartphones these days. In terms of backup, the Samsung Galaxy F54 5G is very good.

The smartphone only lost 4 percent battery after playing a YouTube video on full 2160p resolution on about 80 percent brightness for 30 minutes. Using GPS for one hour drained only 6 percent of the battery, and in our video loop test, the Samsung Galaxy F54 5G lasted 1303 minutes or 21 hours 42 minutes. That is outrageous battery backup.

Coming to charging, the Samsung Galaxy F54 5G supports 25W fast charging. This, in our 0-100 test, charged the device from zero to full in about 128 minutes or 2 hours and 8 minutes, not too fast given today's standards.

CAMERA

Now, the most exciting feature of the Samsung Galaxy F54 5G, the cameras. We get a triple rear camera setup, which includes a primary 108-megapixel shooter, an 8-megapixel wide angle lens, and a 2-megapixel macro shooter. This is where Samsung has claimed to put all its flagship learnings in the optics department. The smartphone has features like "nightography," which is Samsung's term for the smartphone's night photography capabilities. We also get features like astrolapse, single take, and more.

The camera performance on the Samsung Galaxy F54 5G is pretty good. In ideal lighting conditions, the smartphone takes very good quality photos. The colours are vibrant, the details are sharp, and the dynamic range is very good.

I took the Samsung Galaxy F54 5G to Ladakh during my time with the smartphone, and the images out of the 108-megapixel shooter are just brilliant. Both, in terms of vibrancy and details.

Furthermore, the night photography on the Samsung Galaxy F54 5G or Nightography is also brilliant. Even at the darkest hour in one of the darkest place in India (Hanle, Ladakh), the Samsung Galaxy F54 5G was able to capture brilliant

images that actually exceeded my expectations.

Coming to astrolapse, I also tried capturing the star trails with the Samsung Galaxy F54 5G. And while the smartphone wasn't able to capture the stars' movement, the smartphone took a brilliant hyperlapse of the night sky and was able to even capture the milky way moving across the earth's sky! This is absolutely fantastic for a smartphone priced under Rs 30,000.

VERDICT

So that was my review of Samsung's latest sub-Rs 30,000 offering. The smartphone looks similar to its other siblings across categories, it has a very good display for the price and the 6,000mAh battery lasts about two days easily. The 25W charging is a bit slow if we compare it with the competition, but that is not a deal breaker.

One thing where the Samsung Galaxy F54 5G is just average is the smartphone's performance. We tested the smartphone using many benchmarks, and the numbers weren't as convincing to recommend the smartphone over some other high-power devices in the same range.

But that is not what the Samsung Galaxy F54 5G is made for. The smartphone is more about the experience and camera and with the camera, I can safely say that this is one of the best in this segment.

—Darab Mansoor Ali

SPECIFICATIONS

CPU Speed: 2.4GHz, 2GHz | CPU Type: Octa-Core | Size (Main Display): 169.5mm (6.7") | Resolution (Main Display): 1080 x 2400 (FHD+) | Technology (Main Display): Super AMOLED Plus | Max Refresh Rate (Main Display): 120 Hz | Rear Camera: Resolution (Multiple) - 108.0 MP + 8.0 MP + 2.0 MP, Front Camera - Resolution - 32.0 MP | Memory (GB): 8 | Storage (GB): 256
