

gaming or GPS navigation. During a 15-minute gaming session of Call of Duty: Mobile, the Redmi 12C only dropped 5 per cent of its battery. While watching a YouTube video on the highest-possible resolution at 50% brightness, the smartphone dropped 7 per cent battery.

The charging, however, is slow at just 10W. It took the Redmi 12C 157 minutes, which is 7 minutes more than 2.5 hours for the smartphone. This is not the slowest, but having to wait more than 2.5 hours for your phone isn't something anyone wants. Especially with devices in 2023.

CAMERAS

Coming to the cameras, the Redmi 12C comes with a dual rear camera setup that includes a 50-megapixel primary shooter and a VGA depth sensor. The images out of the primary 50MP camera are really good in ideal light. The images look straight out of a mid-range smartphone's camera, if not better.

The images in 50MP, especially, are sharp, crisp, and full of detail in good lighting conditions like a studio or in sunlight. It is in low light, where this camera struggles.

Although the photos from it are passable and good enough for social media usage, it is not a smartphone where you can show off your low-light photography skills. Getting a good shot is still manageable, but you have to work hard for that. In the 50MP mode, the low-light images are much better but still isn't enough for us to call it very good.

VERDICT

So the Redmi 12C is evidently an entry-level offering. The smartphone comes with a striking, yet flimsy design. We get a pretty average display, but good-enough performance. We get a very good battery backup, but the charging is super slow.

Overall, the smartphone is good for the price you will pay for it. There are smartphones that will offer you a

better experience in all these aspects within the same budget, but the Redmi 12C comes with Xiaomi's solid track record in this segment.

The Redmi 12C is priced at ₹8,999 onwards in India. For this price, the smartphone offers a pretty complete and well rounded package.

The software remains the same as other Xiaomi smartphones with MIUI, but if you can get over that, the Redmi 12C is one of the good devices you can buy at this price.
