

into Amazon Alexa app and change settings in the equaliser, you can get some decent amount of bass in the audio, but otherwise, you will be left looking for that thump from the speaker. The speaker is loud enough to fill up a small room, but don't expect it to be the primary audio source for your next party. Other than that, be it podcasts or music from the most popular genres, I doubt you will have anything to complain about with this speaker.

Now, coming to the Alexa functionality and its precision. Here at the Test Centre, we test smart speakers with the following parameters (for voice commands) –

- Human close to the speaker in a quiet room,
- Human close to the speaker with music playing from the speaker at 50 per cent volume,
- Human 10 feet away from the speaker standing in a quiet room, and
- Human 10 feet away from the

speaker with music playing from the speaker at 50 per cent volume.

In all these conditions, the speaker, as prefaced at the start of this section, lived up to the expectations I had, having tested its pricier cousin, the Echo Dot (5th Gen).

The responsiveness was on point in each one of these scenarios, and apart from minor hitches here and there where I had to repeat the commands for the Echo Pop to pick them up properly, the speaker picked up all the commands I sent its way.

I won't be commenting much on the responses generated by Alexa, as it is a completely different story altogether. Let's reserve that for some other day.

VERDICT

The Amazon Echo Pop is another solid addition to the Echo family of smart speakers by Amazon. Priced slightly below the Echo Dot (5th Gen), it makes for an interesting offering for folks who are looking to get started on

their adventures with a smart speaker. The other standalone smart speaker that comes close to the Echo Pop is the Google Nest Mini, which retails at a much lower price than this.

But, its limited capacity as a speaker and some knicks here and there make it lose ground in the race against the Echo Pop, which makes for a really interesting entry into the smart speaker market. Now, if you have the budget, I would say go for the more loaded Echo Dot (5th Gen), but otherwise, the Echo Pop should be enough for you.
