mark, we see the NM760 match up to the AORUS Gen4 7000s but when you look at the FireCuda 530 or the WD Black SN850, then they are miles ahead. And then, if you factor in price, it becomes all the more clear as to which drive you need to purchase.

VERDICT

For a DRAM-less design, the NM760 does offer really good performance thanks to the prowess of the SM2269XTF controller. That being

said, we didn't find the Lexar NM760 available on any of the popular e-commerce sites but there is one mention of the 1 TB SKU selling at INR 18,900. This is very high for a DRAM-less SSD and goes up against the likes of the Seagate FireCuda 530 and the WD Black SN850X which are both selling for much cheaper and use a DRAM configuration. We would say that the NM760, if priced around INR 7300-8000 for the 1 TB SKU would have been a better value proposition and it would be a competi-

tive option to popular SSDs such as the Crucial P3 Plus or the WD SN770 which also offer similar read and write speeds.

—Mithun Mohandas
