

nits of brightness, and 99% sRGB colour space coverage. The monitor's screen can virtually split into two. If you want to use it as a single screen then the HP monitor can support a 165Hz refresh rate. But its refresh rate can reach 165 Hertz in single-device mode. In virtual display modes, where it's split in half, the maximum refresh rate is 60 hertz. Big screen and a lot more!

Big screen and a lot more!

Featuring a 32:9 aspect ratio, the HP e45c G5 superwide monitor effectively gives you the space of two 24-inch Quad HD monitors in one seamless display. This expansive workspace allows you to manage multiple tasks or windows simultaneously, eliminating the need to juggle between tabs. For instance, if you're a coder, you could have your code editor open on one side while your testing or preview window operates on the other. Meanwhile, journalists or writers can have their working documents open alongside essential research materials, streamlining the creative process.

In addition, the monitor's capability to connect to two PCs or function as two separate displays facilitates an effortless switch between different projects, or a balance between work and personal use. The device bridge mode furthers this efficiency by allowing seamless file transfers between connected devices, ensuring that your workflow never skips a beat.

Beyond its functional advantages, this superwide monitor also declutters your workspace. Gone are the days of dealing with the tangle of multiple HDMI and adaptor wires that accompany traditional dual-monitor setups. With just a single cable required for this superwide monitor, your desk remains tidy. Which reduces potential distractions and promotes focused work.

But it's not just about functionality; the HP e45c G5 is also designed for an immersive experience. The curved design of the monitor wraps around your field of view, drawing you into your work. This immersive view can be particularly beneficial for creatives, such as graphic designers or video editors,

providing them with an expansive, accurate view of their canvas.

Furthering its practicality, the monitor comes equipped with a host of ports. With USB Type-C ports, a display port, an HDMI interface, and additional USB ports for peripherals, the HP e45c G5 offers ample room to connect all your devices and peripherals, bridging the gap between your tools and your workspace.

Given the rise of remote working, video conferencing has become a ubiquitous part of the workday. This superwide monitor empowers you to keep your video call open on one side of the screen while your meeting notes or presentation slides fill the other, ensuring you remain in the loop at all times.

Finally, comfort is not overlooked. The adjustable stand allows you to set the monitor at an optimal height and tilt, providing a comfortable viewing experience. This attention to comfort is vital for those long hours of work, making the HP e45c G5 not only a tool for increased productivity but also a companion for healthier work habits. **d**
