

All about professional audio

We got a chance to speak to **Mr Vince Tan, the Vice President Sales, APAC at Sennheiser's Professional Audio Division**. We spoke about all things related to the world of professional audio, including the stigmas, future trends, and efforts being made by brands to make it more accessible. Here's a look at what Mr Vince Tan had to say –

Satvik Pandey
satvik@digit.in

Q Let's start by talking about the future of professional audio. So are there any predictions from Sennheiser about changes in the personal audio space or in its own product line in the professional audio space?

A Sennheiser is a technology-driven brand, and we are constantly exploring new developments in the world of audio. At present, we are heavily focused on the digitalisation of audio technology, which encompasses a wide range of areas such as software and products that utilize digital transmission.

We are fully committed to staying ahead of the curve in terms of audio technology, and we believe that the digitalization of audio is a crucial step in this direction. I can't reveal the products that we will be coming up with in this segment. However, I am confident that our continued focus on innovation and technology will allow us to create premium products that push the boundaries of what is possible in the world of audio.

Mr Vince Tan
the Vice President Sales, APAC,
Sennheiser (Professional Audio Division)

Q So, we also spoke with Mr. Vipin Pungalia. And he also mentioned that immersive audio was coming in as a big trend in the professional audio space. So, can you go into a bit more depth about how immersive audio will change the professional experience?

A Immersive audio is primarily focused

on the recording aspect of pro audio. When it comes to pro audio, there is live and recording. Immersive audio allows people to experience sounds from different angles and 360 degrees, providing a sense of being present in the recording. This technology is not only catering to the demand of listeners but also to the demand for professional audio in live performances. Many companies are already using 360-degree audio environments in live concerts and events. This technology is not only interesting for professionals in the audio industry but for us as Pro audio & Neumann brand.

Q Like I spoke about different demographics, like how professional audio is not only used in certain areas but there is a diversified market of professional audio. So, during and after the pandemic, were there any significant changes that you experienced in terms of your marketplace take in the demographic that you are targeting?

A Amidst the pandemic, there was a surge in virtual events, such as concerts & corporate events, where people participated through their electronic devices. This trend has extended to a wide range of markets. However, with the pandemic nearing an end, we are witnessing an impressive comeback of live performances and people attending them. Nevertheless, virtual events are here to stay and will transform into a hybrid event, where people can attend live and feel the ambiance while others can attend virtually due to distance, scheduling conflicts, or other reasons.

Q During the pandemic, we also saw a rise of streamers and digital content creators, yes, who are also gunning for excellent audio and going for professional gear from brands like Sennheiser. So, was there any change in terms of Sennheiser's approach in terms of approaching these people in marketing and sales?
