

TOP 10 MODERN TECH MYTHS

**MODERN TECHNOLOGY CAN CAUSE
MODERN ILLUSIONS**

Agent001 | agent001@digit.in

1 Quantum computers will completely replace regular computers

While quantum computers hold the potential to solve certain problems much more efficiently than classical computers, they are not intended to replace classical computers entirely. Quantum computers are extremely good at solving a specific set of problems, like factorising large numbers or simulating quantum physics. They are also prone to errors due to their quantum nature, and quantum error correction is still a major field of research. For many everyday tasks, or using spreadsheets, classical computers are perfectly sufficient and efficient.

2 5G is harmful to humans

The belief that 5G technology is harmful to human health is a myth that has gained traction in some circles. However, scientific research and expert consensus indicate that 5G technology does not pose significant health risks. Non-ionizing radiation used in 5G transmission doesn't have enough energy to damage human cells or DNA. Several research studies conducted by independent organisations, such as the International Commission on Non-Ionizing Radiation Protection (ICNIRP) and the World Health Organization (WHO), have consistently found no conclusive evidence of adverse health effects from exposure to 5G.
