

to acquire high-end smartphones originally priced at INR 30,000 for approximately INR 15,000 - 18,000 in the refurbished market. This shift in demand indicates a growing recognition of the value and affordability offered by refurbished devices.

As ReFit Global continues to monitor the changing patterns in Indian consumers' buying behaviour, they are adapting their strategies to meet the evolving demand. By understanding the demand for smartphones within specific price ranges and recognising the increased interest in refurbished devices, ReFit Global is well-positioned to cater to the preferences of Indian consumers effectively.

Q What budget category of smartphones is in demand the most? Also, are there any specific brands or types that people are going for?

A In terms of demand, there are distinct preferences among Indian consumers based on their location and budget. In metro cities, there is a higher demand for smartphones in the higher average selling price (ASP) range, particularly brands like OnePlus and Apple, with prices ranging from INR 12,000 to 18,000 in the refurbished segment. However, in tier 2 and tier 3 cities, there is a significant demand for smartphones in the price range of INR 7,000 to 8,000. This price point accounts for approximately 60% of total sales, encompassing both metro and tier 2 & 3 cities.

Specific brands that people are gravitating towards in the refurbished segment are OnePlus, Apple, and select models from Oppo and Vivo. In terms of volume, ReFit Global observes a higher contribution from mid-range Samsung

phones, as well as devices from Oppo, Vivo, and Xiaomi. Xiaomi, and Samsung in particular, accounts for approximately 60% of the total sales volume.

These preferences highlight the varying consumer choices based on budget and location, with a notable demand for premium brands in metro areas and a focus on affordable options in tier 2 and tier 3 cities. ReFit Global takes these factors into consideration to effectively meet the diverse demands of Indian consumers across different budget categories and locations.

Q Can you shed some light on the process of refurbishment that a device goes through and what makes it different from a regular overhaul that a local technician could also do?

A The process of refurbishment that a device undergoes at ReFit Global is carefully designed to differentiate it from a regular overhaul that a local technician might perform. It is crucial to educate consumers about the distinction between refurbished devices and second-hand devices, as the latter may be sold without addressing any technical issues that arise after purchase.

When a phone reaches our warehouse in the refurbished segment, we initiate a thorough evaluation process. Our diagnostic app conducts a comprehensive assessment of the device, consisting of 40 checkpoints. This enables us to identify any technical glitches or problems present in the phone.

To ensure optimal conditions for refurbishment, we meticulously monitor the temperature and moisture levels within the warehouse. We also verify the proper functioning of all machinery and maintain voltage levels in accordance with the requirements of the equipment. This attention to detail helps create an ideal environment for the refurbishment process.

Once the assigned engineer reviews the device and approves it for repair, the diagnostic app is rerun to confirm that all identified issues have been successfully resolved. This step ensures that the

device undergoes thorough troubleshooting and that all necessary repairs are carried out effectively.

By emphasising our rigorous refurbishment process, ReFit Global aims to raise consumer awareness regarding the significant differences between refurbished devices and second-hand devices. Our commitment to addressing technical glitches and providing quality assurance sets refurbished devices apart, instilling confidence in customers who choose to purchase these devices.

Q Apart from smartphones, what other categories of gadgets does ReFit Global work with?

A In addition to smartphones, ReFit Global also deals with other categories of gadgets, such as large appliances and laptops. However, it is important to note that our involvement in these categories is slightly different. Instead of performing end-to-end refurbishment, we primarily focus on inventory segregation. After carefully sorting the inventory, we then distribute and sell these gadgets in the offline market. This allows us to extend our expertise beyond smartphones while still ensuring the quality and reliability of the devices we offer.

Q A percentage of the devices that are being worked on by ReFit would also be iPhones. How difficult is it to work with iPhones for ReFit as a brand, and from where do they source the parts? Is ReFit a part of the Apple Self-Service Repair program?

A ReFit, as a brand, encounters a certain percentage of iPhones among the devices they handle. Working with
