

OnePlus Nord 3 5G

A complete mid-ranger

The OnePlus Nord 3 5G is the latest mid-ranger from OnePlus, making it the third-gen hero device in OnePlus' more affordable range of Nord smartphones. With a design similar to its younger sibling, the OnePlus Nord CE 3 Lite 5G, the OnePlus Nord comes with a flagship-level chipset and goes directly in competition with some critically-acclaimed devices in this range like the iQOO Neo 7 and the Poco F5.

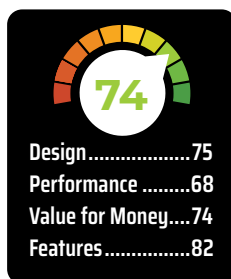

So, is the OnePlus Nord 3 good enough to take on its competitors from rival brands? I used the smartphone for about a week and put it through rigorous testing to see what the smartphone is all about. In this review, we will take a look at the smartphone's design, display, performance, battery, and camera performance to give you a verdict on if the OnePlus Nord 3 5G is worth your ₹33,999. Let's take a look:

DESIGN

Design wise, the OnePlus Nord 3 5G looks pretty much the same as its younger brother, the OnePlus Nord CE 3 Lite 5G with the two camera cut-outs, the rather tall design orientation, and flat-edges. Now, while from the looks of it, the smartphone is very similar to the OnePlus Nord CE 3 Lite 5G apart from the weirdly-placed dual flash, the OnePlus Nord 3 is much more premium. We get a glass back panel, an edge-to-edge display and OnePlus' signature alert slider, first time on a flat frame.

As far as the design is concerned, there isn't anything special going on with the OnePlus Nord 3 5G. There is little to distinguish the more premium device with the more budget

₹33,999

friendly OnePlus Nord CE 3 Lite 5G. Further, the flash placement doesn't really look good and the smartphone is a bit too tall, which is not good for single-handed usage. Yes, we get a glass back panel with Gorilla Glass 5 protection that enhances

the in-hand feel and from the front, the difference is evident between the Nord 3 and Nord CE 3 Lite, which is also good.

DISPLAY

Coming to the display, we get a nice 6.74-inch 10-bit AMOLED display with a 120Hz refresh rate and HDR10+ support. On paper, this display is almost flagship-level. In real life, things are

similar. The display looks stunning from the moment you set eyes on it. The colours are vibrant yet accurate, the display is bright enough to be used in all kinds of environments, and it is perfectly responsive and slick.

OnePlus claims a peak brightness of 1,450 nits on the Nord 3. We put this to test using a Lux Meter, and the smartphone gave a maximum brightness of 868 nits and a minimum brightness of 3 nits on a plain white background. This is pretty good for any smartphone, and it basically means that there will be no visibility issues with this display, no matter how bright the sun is out there.

Further, the OnePlus Nord 3 5G also supports HDR video playback on apps that support it (Netflix, YouTube and more), which means that watching movies and TV shows is a pleasing experience on this smartphone. You will see things in very good detail and the image is super sharp while watching content. I watched a bunch of HDR videos on the OnePlus Nord 3 5G and the experience was quite immersive and vibrant.

In terms of responsiveness as well, the OnePlus Nord 3 5G's display is very smooth and slick. The smartphone comes with 120Hz refresh rate, which most users already know results in a super responsive scrolling and switching experience, but the issue with OnePlus devices is that some very basic apps like YouTube don't support high refresh rate and the smartphone switches back to 60Hz, which is not the case with any other manufacturer.

Overall, this is a very good display. I found this to be one of the best displays on any smartphone in this range, and was instantly impressed with the picture quality, since the moment I set my eyes on this panel.

PERFORMANCE

Since this is a OnePlus smartphone, performance obviously takes a step forward. The OnePlus Nord 3 5G is powered by a MediaTek Dimensity
