

Kodak 65-inch Ultra HD (4K) LED Smart Google TV

Immersive experience on a budget, but with a few trade-offs

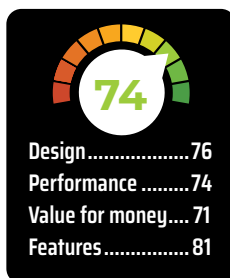

₹44,499

VERDICT

The Kodak CAPRO 65 offers a large and decent 65-inch display at an affordable price point. While it may not boast cutting-edge technology or the most advanced features, it manages to provide a satisfactory viewing experience for those seeking a budget-friendly option and will be viewing high-resolution content from OTT apps. All said and done, it's its flaws are easy to overlook for the price.

For consumers who are particular about colour accuracy, SDR content in Movie mode and Dolby Vision HDR should work well. The HDR10 and HDR10+ feel lacking. While it may not deliver the immersive audio experience, the sound quality is still acceptable for the price.

DESIGN, REMOTE AND SOFTWARE

The TV is manufactured by SPPL in India, which also licenses other brands like Thompsons and Westinghouse. This Kodak CA Pro-series TV has extremely slim bezels on the side. The gold-finish metal stands are positioned a little away from the corner, which is why the TV will easily fit on moderate to large-sized tables.

The stand rests sturdily on our table, but since this is a large 65-inch TV it expectedly exhibits a slight wobble upon being flicked. The rose gold colour of the bottom beze has a subdued tone which doesn't feel tacky and doesn't get distracting. The power chord is detachable and you should be able to easily replace it with a suitable length alternative if needed.

All ports are side-facing and positioned on the left, which makes them easy to access. The TV has three properly spaced HDMI 2.0 ports with HDMI 3 supporting ARC. There are two USB ports positioned back to back, AV In, optical output, Antenna port and an ethernet port. As for wireless connectivity options, you get dual-band Wi-Fi and Bluetooth 5.0.

The remote feels a bit flimsy but is quite ergonomic and has 4 hotkeys for popular apps. We liked that the fourth key is a 'Daily Key' that you can remap to open any app of your choice. The Frequently used keys, such as the home button and D-pad, are conveniently distinguished in low light by their white color, which should be quite helpful - atleast until your muscle memory adapts to the layout.

The software is a Google TV interface powered by a MediaTek quad-core processor backed by 2GB RAM and 16GB storage. This is a powerful configuration and perfectly apt for TVs in this price segment. UI transitions felt responsive and features like screen mirroring via Chromecast built-in and voice commands worked smoothly.

PICTURE QUALITY

This is a 4K LED LCD TV that supports all popular HDR formats including Dolby Vision and HDR10+. There are several picture modes and during our testing we noticed that the TV could randomly switch to presets like HDR (energy saving) or User mode which are not properly tuned. For best experience you will need to switch to movie mode in SDR and HDR content.

Color accuracy is excellent in SDR in the Movie mode as measured by Claman Ultimate Colour Checker using Spectral C6 HDR2000 colourimeter. We recorded a average Delta Error just 2.3, with maximum error in the greyscale region. Bright and dark SDR sequences are rendered faithfully and skin tones look natural.

We recorded a maximum brightness of 345 nits for the pannel, but in the cinema mode you will get an average of
