

approx 288 nits. We measured a contrast of around 930:1 which is standard for LED LCD panels in the segment.

In spite of great chromaticity performance, the overall quality was slightly let down with greyscale performance in SDR. The TV is using a basic LED LCD panel where the screen uniformity is about average and you can see the light from edge LEDs bleed in the letterbox bars when viewing content in the dark.

We didn't notice any unnatural motion smoothing by default. The upscaling for legacy 480p content is also about average.

Due to the low native contrast and low brightness of the panel, the overall HDR experience isn't very impactful. When it comes to different supported formats, Dolby Vision works best.

Colours look natural and scenes with average APL are properly displayed. With HDR10 and HDR10+, the skin tones look slightly reddish and shades of blue in sky and water look a bit unnatural. As you can see in the greyscale analysis, the TV doesn't track EOTF diligently for mapping luminance values in HDR10 in the Movie preset.

The TV covers 98% of the rec 709 colour space, which is to say it can reproduce most of the colours in content mastered in SDR. As for HDR, we recorded a BT2020 colour volume of 59.28 in UV terms, which is again standard for affordable LED LCD TVs.

AUDIO QUALITY

The TV comes with 40W speakers that can get loud enough for listening in a

large hall. Dolby Atmos is supported, but don't expect much in terms of surround sound from TV speakers. The dialogue clarity is decent enough in the movie audio preset, but if you are particular about audio, you will need to invest in an external soundbar or sound system.

VERDICT

The Kodak CAPRO 65 offers a large and decent 65-inch display at an affordable price point.

While it may not boast cutting-edge technology or the most advanced features, it manages to provide a satisfactory viewing experience for those seeking a budget-friendly option and will be viewing high-resolution content from OTT apps. All said and done, its flaws are easy to overlook for the price.

For consumers who are particular about colour accuracy, SDR content in Movie mode and Dolby Vision HDR should work well. The HDR10 and HDR10+ feel lacking. While it may not deliver the immersive audio experience, the sound quality is still acceptable for the price.

If you are looking for alternatives, you may also consider the Nu 65 inch Ultra HD (4K) Smart TV that runs LG's WebOS TV interface and ships with LG's magic remote. This one too lies in the same price segment and offers decent value for money.
