

In synthetic GPU benchmarks, for which we use 3DMark, the MSI Cyborg 15 has surprisingly low scores.

However, it's a different story in real-world gaming benchmarks where the MSI Cyborg more than makes up for the low synthetic GPU scores. Ultimately, real-world gaming performance is what matters, so in this case, the RTX 4050 onboard the MSI Cyborg 15 delivers.

## GENERAL PERFORMANCE

Finally, we come to the performance. We'll start things off with the gaming performance.

The MSI Cyborg 15 features a 12th gen Intel Core i7-12650H which is paired with the NVIDIA GeForce RTX 4050 Laptop GPU; in our tests so far, the RTX 4050 has managed to outperform the RTX 3060 Laptop GPU in most real world gaming benchmarks.

However, when compared to the RTX 4050 in the Acer Predator Helios Neo 16 we recently tested, the 4050 in the Cyborg falls short by a pretty large

margin. This most likely has to do with the TGP on both cards being different. Despite both laptops featuring the same GPU, the lower TGP on the NVIDIA GeForce RTX 4050 laptop GPU in the MSI Cyborg causes it to fall short.

This trend is especially noticeable in synthetic GPU benchmarks, for which we use 3DMark, where the MSI Cyborg 15 has surprisingly low scores, even when compared to the NVIDIA GeForce RTX 3060 Laptop GPU.

However, come real-world gaming, it's a different story entirely where the MSI Cyborg more than makes up for its low synthetic GPU scores. Ultimately, real-world gaming performance is what matters, so in this case, the NVIDIA GeForce RTX 4050 onboard the MSI Cyborg 15 certainly manages to deliver, especially if you're looking for a gaming laptop packed with an entry level GPU.

## VERDICT

We've tested enough RTX 4050s this

year to say that it's a solid step up over the NVIDIA GeForce RTX 3050 or even the 3050 Ti. If you're in the market for an NVIDIA GeForce RTX 4050 gaming laptop, the MSI Cyborg 15 is probably one of the cheapest ones you can pick up right now.

It's got a great design going for it, decent I/O options, a decent 144 Hz display, and solid hardware under the hood. The only flaw we would say is that it runs a bit on the hotter side. Definitely worth considering if you're looking to pick up an RTX 4050 equipped laptop under Rs 1 lac for yourself!

**—Manish Rajesh**

## SPECIFICATIONS

Processor: 12th gen Intel Core i7-12650H | GPU: NVIDIA RTX 4050 Laptop GPU | Display: 15.6-inch 144Hz FHD | RAM: 16GB | Storage: 512GB | Ports: 2 USB-A, 1 USB-C, HDMI 2.1, RJ45 Ethernet, 3.5mm audio
