

Sony set to drive gamers' transition from monitors to TVs

In conversation with **Ranvijay Singh**, Head of BRAVIA Business at Sony India

Gamers switching to TVs? Sounds absurd right? Well, Sony believes with their latest innovations, the difference in experience between a monitor and TV would be almost indistinguishable, driving the controller/mouse and keyboard warriors towards larger screens. Especially after the launch of their latest Bravia X90L.

I had a conversation with Ranvijay Singh, Head of BRAVIA Business at Sony India, about this change and how Sony's technology could be the driving force for this transition. Not only that, but we also spoke about the changing landscape of the Indian TV market and the scope of customisation of the TV viewing experience. Here's how the conversation panned out –

Q With a new wave of gamers coming in India, what percentage do you think are ready to shift to larger screens like TVs from the conventional monitors that they have been using for years?

A I believe that the new wave of gamers in India presents an exciting opportunity for the transition to larger screens, such as TVs, from the conventional monitors they have been using

Ranvijay Singh
Head of BRAVIA Business,
Sony India

for years. Gaming has evolved significantly, and with the growing popularity of immersive gaming experiences, gamers are seeking larger displays to enhance their gameplay.

While the shift from monitors to TVs may not be instantaneous for all gamers, we anticipate a substantial percentage of them being ready for the transition. Larger screens offer several advantages, including a wider field of view, vibrant visuals, and better overall immersion. Additionally, as gaming communities continue to expand and evolve, gamers are

increasingly engaging in multiplayer experiences, making large screens ideal for a shared gaming experience.

Sony Bravia TVs, renowned for their exceptional picture quality and innovative features, provide a compelling option for gamers seeking a seamless transition. With advanced technologies like high refresh rates, low input lag, and HDR support, Sony Bravia TVs offer an immersive and visually stunning gaming experience that conventional monitors may struggle to match.

Q Are there any plans from Sony to provide special integration of their TVs with their consoles?

A Sony is committed to providing special integration between our TVs and consoles to deliver an unparalleled gaming experience, and that the reason we have introduced the Perfect for PlayStation5 features with all our L series XR models 2023 launch. The TV automatically detects when the PlayStation is attached to the television and changes to Game Mode. Features like Auto HDR tone mapping, Auto genre mode, Black equalisers are just a few from our plethora of gaming features in year 2023.

We recognise the importance of seamless compatibility and optimal performance when it comes to gaming on our TVs. Sony has a long-standing history of synergy between its TV and console divisions, and we continuously strive to enhance this integration further. Our goal is to create a cohesive ecosystem where gamers can enjoy their favourite PlayStation titles on Sony BRAVIA televisions with utmost convenience and quality.

Also, for the first time ever, Sony is offering discounts on purchases of BRAVIA XR televisions with PS5 gaming consoles. Consumers can avail a special discount of up to Rs 24,000/- on a combined purchase of PS5 with any BRAVIA television from the FY23 XR range. This exciting deal starts from 1st July 2023 onwards and is valid until stocks last.
