

Q As a brand that has been active across the world in the audio-video space, what differences do you see in the demands of Indian consumers versus that of the rest of the world?

A I have noticed some notable differences in the demands of Indian consumers compared to the rest of the world in the audio-video space. India, with its rich cultural diversity and unique preferences, presents a distinct market with specific consumer needs and expectations. One significant difference is the emphasis Indian consumers place on value for money. While quality is important universally, Indian consumers are particularly conscious of getting the best bang for their buck.

In addition, Indian consumers often prioritise connectivity options and compatibility with a wide range of devices. With the prevalence of multiple entertainment sources such as set-top boxes, gaming consoles, and streaming devices, seamless integration and versatile connectivity options are highly valued. Indian consumers desire TVs that can effortlessly connect and interact with their existing devices, providing a unified entertainment experience.

As a brand, we understand these unique demands of Indian consumers and strive to cater to their needs by offering high-quality, durable, and compatible products. We continuously innovate to provide cutting-edge technology and features that enhance the audio-video experience while ensuring great value for money. Our commitment to meeting the specific demands of Indian consumers sets us apart in this dynamic and evolving market.

Q Innovation is cropping up at the research labs of brands left, right, and centre, with flagship technologies trickling down into mid-range and budget TVs. How is Sony keeping up with this trend?

A Sony remains at the forefront of

innovation in the television industry. We understand the evolving needs and expectations of consumers, and we are committed to incorporating flagship technologies into our entire range of televisions, ensuring that everyone can enjoy cutting-edge features and exceptional quality. Sony's approach to keeping up with this trend is rooted in our commitment to research and development. We invest heavily in our research and continuously pushing the boundaries of what is possible in television technology. This enables us to develop and refine ground-breaking innovations that eventually trickle down into our more accessible product lines.

By leveraging our expertise and advancements in areas like display technology, image processing, and audio engineering, we strive to bring premium features and performance to a wider audience. This approach allows us to offer televisions that deliver impressive picture quality, immersive sound, and intuitive user experiences with not being heavy on the customer's pocket. Moreover, a focus on vertical integration across various product categories, including televisions, gaming consoles, and audio products, helps us to create synergistic experiences and seamless integration. This ensures that users can enjoy the benefits of flagship technologies across product categories, enhancing their overall entertainment ecosystem.

Q What does the Sony X90L bring to the table for gamers?

A The Sony X90L, a flagship model in the Sony BRAVIA TV lineup, brings an impressive array of features and benefits to the table for gamers. Designed with gaming enthusiasts in mind, the X90L offers an exceptional gaming experience with its cutting-edge technology and specialized enhancements. First and foremost, the X90L boasts a stunning 4K Ultra HD resolution, delivering breathtak-

ingly sharp and detailed visuals. The PS5™ automatically recognises BRAVIA X90L and selects the best HDR setting for your televisions accordingly. With Auto HDR Tone Mapping, the HDR settings will be optimised instantly during your PS5™ console's initial setup. So even in high-contrast scenes, you will see the crucial details and colours in the brightest and darkest parts of the screen.

The TV will automatically switch into the Game mode to minimise input lag and make the action more responsive. When watching movies on PlayStation5® consoles, it switches back to standard mode to focus on picture processing for more expressive scenes. To enhance the gaming experience even further, the X90L features HDMI 2.1 compatibility, allowing for features like Variable Refresh Rate (VRR) and Auto Low Latency Mode (ALLM). These features reduce screen tearing, enhance motion clarity, and ensure optimal input lag when connected to compatible gaming consoles.

The X90L series include an easy-to-use Game Menu where gamers can tailor their settings to their preferences, such as turning on or off VRR or Motion Blur Reduction with quick access. The Game Menu also allows users to increase the brightness in dark areas to easily spot objects and opponents with the black equaliser and can easily take aim on their opponents with six types of crosshairs. New this year is the ability to customise the size of the screen with the screen size feature to concentrate gaming with a smaller, focused screen.

Additionally, the X90L incorporates Sony's Acoustic Multi-Audio technology with a Double bass Reflex, which delivers immersive sound by aligning the sound with the action on the screen. This creates a more realistic and engaging audio experience, adding depth and dimension to games. **D**
