

Valve adds de_overpass to CS2, and it looks phenomenal

Counter-Strike 2's release is right around the corner. Valve had set the release date to be in the Summer of 2023, and as we get closer and closer to the full release of the game, the Counter-Strike 2 limited test beta has been getting some exciting new updates. In the latest update to the beta, Valve has added the first fully overhauled map to the game – de_overpass.

At the time of the announcement, Valve had mentioned that the new

Source 2 upgrade would bring along three categories of maps to the game – touch stone maps, upgrade maps, and full overhaul maps. Touch stone maps, for example - de_dust2 would get some slight changes but will remain to be the primary testing ground.

Upgrade maps, for example - de_nuke would make use of Source 2's lighting and materials. And, full overhaul maps, for example - de_overpass would be, in the words of Valve, "fully rebuilt from the ground up, leveraging

all of the new Source 2 tools and rendering features."

Well, we can't deny it - de_overpass was worth the wait

The Counter-Strike 2 beta had released with de_dust2. Since then, in the subsequent updates, players have received a look at touch stone maps, in the form of de_nuke. Now, gamers will get a chance to have their first look at what the game would look like in its full Source 2 glory with the release of de_overpass.

From the early gameplay footage that has been released, the de_overpass looks phenomenal with every shader and texture being something that we hadn't seen before in Counter-Strike. All of this, while remaining true to the quintessential CS spirit, is something that few people expected Valve to be able to pull off, but they have done it!

In the release notes for July 17, Valve has also announced the addition of Wingman mode. Players can play Overpass in Deathmatch, Casual, Wingman, and Competitive game modes. And, de_vertigo, has been added to Deathmatch and Casual game modes. With the addition of the new maps, Nuke and Office, which had been added in an update earlier, have been removed.

India's all-female CS:GO e-Sports team competes in 15 WEC Asian Qualifiers 2023

This year's World Esports Championship is happening in Romania and teams from all over the world are joining the tournament. Almost 130 teams will be playing in WEC 2023 from six various esports titles. In addition to that, the all-female Indian CSGO squad has also entered the Asian Qualifiers of WEC 2023. The team likes to call itself Team Top-G and it's competing with other teams in WEC 2023 Asian Qualifiers in Riyadh, Saudi Arabia from July 15 to July 17. Before qualifying to Asian Qualifiers, Team Top-G won the National Esports Championships

(NESC) 2023, which was organised by the Esports Federation of India (ESFI) earlier this year. The team has five female players; the leader Swayambika Sachar aka Sway, Shagufta Iqbal aka xyaa, Nidhi Salekar aka Stormyyy, Dilraj

Kaur Matharu aka COCO, Aastha Nangia aka CrackShot, Priyanka Choudhary aka ALEXAA and the coach Sabyasachi Bose aka Antidote.

The tournament is not organising Counter-Strike matches only, there will be more esports titles like eFootball, DOTA 2, Tekken 7, and PUBG: Mobile.
