

KILLER RIGS

Be it retro or be it M.E.T.R.O., we've got a gaming PC for your budgets!

By Mithun "Barbarian_Monkey" Mohandas | feedback@skoar.in

Here's a very likely scenario - your friend is planning to buy a new gaming PC. Obviously, you would want to help out a dear friend, wouldn't you? You would certainly help him identify the right components, then hunt down the best deals and even accompany your friend as he goes about buying all the necessary components. That's when you realise that you can build a pretty good gaming PC for cheap! And if you can one-up your friend, then there's nothing like it.

Gaming on a budget!

The Intel Core i3-12100F is still a great processor for budget builds. The 12100 without the F is also great but instead of relying on the inbuilt UHD 730 iGPU we're option for the AMD Radeon RX 6400 which not only has more video memory, thus freeing up the system RAM, but it also is more powerful than the integrated one. Games such as Genshin Impact should give around 40 FPS and Fortnite should see a remarkable improvement with the discrete GPU. We've also added an NVMe SSD to the build considering how low prices have fallen of late.
