Keychron K8 Pro Mechanical Keyboard Review

A versatile and reliable TKL offering from Keychron

By **Manish "Trigger-Happy" Rajesh** | feedback@skoar.in

When it comes to mechanical keyboards, Keychron is a pretty well-known brand.

Although we don't see a lot of them in India, we've definitely heard about them.

So when we had the chance to actually review the Keychron K8 Pro, we jumped at the chance. I used the Keychron K8 Pro for over a month now, for both work and gaming, and I can confidently say that Keychron lives up to its hype. Let's take a closer look at the Keychron K8 Pro.

Build and Design

The Keychron K8 Pro boasts a TKL or tenkeyless layout, meaning there's no numpad on this keyboard. And that's fine, it's kind of

what they were going for. The idea is to promote a clean and efficient desktop where the keyboard doesn't take up 70 per cent of the space. Other than that, its sleek design and robust build quality are immediately noticeable. It's also surprisingly heavy for its size, and that's thanks to the keyboard's aluminium frame which makes this a fairly rugged and durable keyboard.

The keyboard comes with matte texture keycaps which don't attract fingerprints, which is nice. The keycaps are also double-shot ABS keycaps with sharp and clear legends. The Keychron K8 Pro is also a wireless keyboard, and comes with a detachable USB-C cable.

Unfortunately, the K8 Pro does not come with any kind of software support. So there's no way to create macros or adjust the RGB back-

lighting other than the few presets that are available through keyboard shortcuts. That said, the lighting is fairly bright, but not too bright; you should have no trouble seeing the keys in the dark. If you really need macros for your work or gaming needs, third party tools will work with the keyboard.

Performance

The K8 Pro comes with Gateron switches. Our unit came with Gateron Blues, but you have options which feature Gateron Reds and Gateron Browns as well. While I personally prefer Red switches, the typing experience on the Keychron K8 was still very satisfying.

The keys are well-spaced and feel very responsive, which contribute to a fairly smooth typing experience, even over extended periods
