Wireless Connectivity and Battery Life

In terms of connectivity, the Keychron K8 Pro excels with both wired and wireless options. Utilising Bluetooth 5.1, the keyboard can be paired with multiple devices effortlessly, allowing for seamless switching between them. The K8 Pro supports up to three Bluetooth devices simultaneously, making it ideal for users who frequently switch between computers, tablets, or smartphones.

During the times we did use the wireless connection, it remained stable for the most part, with no noticeable input lag. We wouldn't normally game wirelessly on a Bluetooth keyboard, but for casual titles, the Keychron K8 works great even wirelessly.

Need quicker response times? Simple switch back to wired. The K8 Pro can be used in both Bluetooth

and wired modes simultaneously, allowing for charging while using the keyboard without any interruption in your usage.

The K8 Pro houses a 4000mAh lithium battery which according to Keychron can last up to 240 hours with the RGB lighting off, and around 72 hours with RGB lighting at maximum brightness. In our day to day use, we found that we needed to charge the keyboard roughly once a week at most, which is impressive as well.

Gaming

We've already spoken about how comfortable the keyboard is and how good it feels to type with the

K8 Pro. The same carries over to gaming as well, the actuation force on the Keychron K8 feels just right, and the response feels crisp.

Plus, there's a reason pros prefer TKL keyboards, because it allows you to keep your hands closer together which helps with performance. The keyboard doesn't have software support, but if you're willing to use third-party apps you can still get macros running if that's something you need.
