iPhone 15 Pro Max with Ultra with a 10x periscope lens?

Apple is highly rumoured these days because of its upcoming smartphone lineup, the iPhone 15. The iPhone 15 series is expected to include

four smartphones as usual but what could be different this year is the high-end model Pro Max might be changed with Ultra. We have heard rumours about iPhone 15 Ultra previously as well, and now it is back again with another major tip. The iPhone 15 Ultra is anticipated to feature a periscope lens. Let's take a closer look at this tip.

An X (formerly Twitter) user, Andrew O'Hara, has posted that he is receiving multiple reports of Apple will include the iPhone 15 Ultra this year, rather than the Pro Max model. He added the iPhone 15 Ultra could be equipped with a 10x periscope lens. That means it will be able to zoom up to 10x. Same optical we have seen in the Samsung Galaxy S23 Ultra's 10-megapixel sensor. However, it is not yet revealed which sensor Apple will use, but a report claimed a 1-inch Sony IMX903. <https://bit.ly/3YJWUdb>

India ranks 2nd in the world in smartphone production between 2014-2022

Between the years 2014 and 2022, the shipment of phones made in India has crossed the 2 billion mark. This feat has landed India the title of the second-biggest mobile phone-producing country. India crossed the 2 billion Made in India phone shipment mark between the years 2014 and

2022. This achievement has gotten India the title of the second-biggest phone-producing country. Counter-point Research suggests that the reasons behind this include "huge internal demand, increasing digital literacy and government push". Various government schemes including Phased Manufacturing Program (PMP), Production Linked Incentive (PLI) and Atma-Nirbhar Bharat (Self-Reliant India) could have possibly pushed towards this achievement too. The research further reveals that the growth in local manufacturing also shows a steady growth. <https://bit.ly/3P6blrX>

First look at Apple's new USB Type-C cable

By now, we are pretty much certain that the next generation Apple iPhone's will come with a USB Type-C port for charging. Now, we have also gotten our first look as to how the new iPhone charging cable will look. According to images on the internet, Apple will bring braided USB-C cables for the iPhone 15 series. This is something we have already seen on the iPad, where the company ships braided USB-C to USB-C cables. <https://bit.ly/47B2dsR>

Never sleep next to your charging iPhones

Convenient as it may be, putting your phone on charge and sleeping next to it may pose some serious threats. So, if you're someone who likes charging your phone overnight, you may want to give it some serious thought. Apple has issued a rather grim warning to this effect. In a service announcement, Apple warned its users about the potential dangers of sleeping next to their charging phones. <https://bit.ly/47KyQEC>
