

WhatsApp now lets users share HD photos

The days of asking your friends or

family to send photos on WhatsApp as a "file" or send them over on Signal instead seem to be behind us. Meta-owned messaging company WhatsApp is finally allowing users to send photos in HD quality on the app (both iOS and Android) and through web experience! Meta CEO Mark Zuckerberg took to Facebook to share this update and show off the new feature.

The much-awaited news comes a couple of months after the news first got out that WhatsApp was testing a way for users to send HD photos through WhatsApp messages. The feature has finally arrived and is now rolling out to iOS, Android, and Web Experience users starting today. Users can choose to either send HD photos or SD photos, according to their preference. However, it may take a couple of weeks for all users to be able to use this feature.

AP says you can use AI

In the ever-evolving world of news, the Associated Press

(AP) has always been a trendsetter. With AI knocking on journalism's door, AP decided to set some ground rules. The debate is real. AI's capabilities in the newsroom are impressive, but AP's guidelines are clear:

- AI cannot be used to create publishable content and images for AP.
- The material produced by AI must be vetted carefully.
- AI-generated photos, videos, or audio segments should not be used unless the AI alteration is the main subject of the story.

■ **INSTAGRAM THREADS**

Threads to roll out its website as per reports

Threads, a micro-blogging platform, which was launched on July 5 by Meta, got everyone's attention and boarded over 100 million users in just a week. Later the micro-blogging platform faced a decline in its users by up to 79%, according to the reports. Today another report came up which suggests a website version of Threads app will be rolled out this week. This could be another move to fight X

(formerly Twitter) back. The website version will also benefit users in many ways. The accessibility to the website will be much easier for users and they could also be able to use Threads in Windows as well.

The Wall Street Journal has shared news that Threads will soon be available on the web that lets people use Threads on their computers for the first time. Instagram CEO Adam Mosseri had also mentioned earlier that a Threads web version was coming soon. <https://bit.ly/45igdpP>

■ **EMERGENCY SERVICES**

DOT's emergency alert test on Android phones in India causes confusion

Today some users have received an 'Emergency Alert' from the Department of Telecommunication, Government of India. This emergency alert was basically a test flash for any emergency in the future, so that the Government can alert you under any emergency. Users received an emergency alert: severe' flash along with a loud beep. Interestingly, the emergency alert was sent to Android users only. Users received this alert at 1:35 PM today on August 17.

The emergency alert says, "This is a SAMPLE TESTING MESSAGE sent through the Cell Broadcasting System by the Department of Telecommunication, Government of India. Please ignore this message as no action is required from your

end. This message has been sent to the TEST Pan-India Emergency Alert System being implemented by the National Disaster Management Authority. It aims to enhance public safety and provide timely alerts during emergencies". <https://bit.ly/3YMMYZy>
