

iQOO Neo 7 Pro 5G

Best price-to-performance in a familiar packaging

iQOO has launched yet another smartphone with an outstanding price-to-performance ratio. The iQOO Neo 7 Pro comes as a smartphone centered towards the mobile gamers out there.

So how much of an upgrade does the iQOO Neo 7 Pro offer in terms of the premium we pay on the device? How much of a difference does this secret Independent Gaming Chip offer? And finally, is the smartphone worth the ₹34,999 starting price? Let's find out!

DESIGN

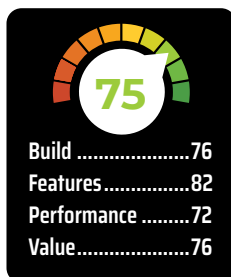

Design wise, the iQOO Neo 7 Pro looks very similar to its younger sibling, the iQOO Neo 7. The smartphone has a similar shape with the flat screen and a curved back. We also get the same square-ish dual-tone camera module and a similar edge-to-edge hole-punch display. However, there are more premium touches here and there.

First and foremost, the vegan leather back panel, which we only get in the orange colour. While I'm not sure if I like the colour, the vegan leather back provides a very premium in-hand feel. The orange is a bit too bright for my liking, but the golden hints here and there go with the orange colour well. We get a golden frame, the iQOO logo is golden on the back panel, so the colour combination is nice, but we aren't sure how many people will prefer this over more traditional colours.

The weight of the iQOO Neo 7 Pro 5G is also pretty good. The smartphone is lightweight at just 197 grams, which makes it easy to carry and hold on to, for longer gaming sessions. Overall, the iQOO Neo 7 Pro has a very familiar

₹34,999

design, which is very similar to its younger sibling, the iQOO Neo 7.

DISPLAY

Coming to display, the iQOO Neo 7 Pro 5G uses a 6.78-inch AMOLED display with an FHD+ resolution. The display on this

smartphone is pretty much the same as the one on the iQOO Neo 7, so the experience is also similar. The FHD+ resolution is pretty much standardised in this segment with most devices having similar resolution. Here, we get a 1080 x 2400p resolution, which makes for a 381ppi pixel density. The detail and sharpness is as good as any other smartphone in this range.

While in terms of details and sharpness this display fares well, it does feel slightly dull in terms of the vibrancy and brightness as compared to some of the competing devices. For example, the iQOO Neo 7 Pro's display isn't as bright as competing devices like the OnePlus Nord 3 5G, which showed a maximum bright-

ness of 868 nits in our Lux Meter test. The iQOO Neo 7 Pro showed a maximum luminance of 707 nits, which is even below the slightly cheaper Poco F5.

However, luminance is not everything. In terms of colour accuracy, this display is right up there with the competition. The iQOO Neo 7 Pro 5G showed very impressive colour accuracy in our testing. The smartphone showed a brilliant DeltaE of 1.5 in the colour checker analysis in sRGB colour profile, which is too good for a smartphone. DeltaE signifies the error in the colours on a display, which means the lower it is, the better. For perspective, a DeltaE of under 4 is considered good for smartphones.

Even in the grayscale test, the iQOO Neo 7 Pro 5G showed impressive results in the sRGB profile. Here, the RGB balance is very good and even with an Average Gamma of 2.27 and an average DeltaE of 1.7.

In DCI-P3 tests also, the iQOO Neo 7 Pro 5G performed well, but the results weren't as great as the sRGB colour profile. In the colour checker analysis, the smartphone showed an average DeltaE of 3, which is again pretty good, but since lower is better, it doesn't seem as good as the 1.5 DeltaE in the sRGB colour profile. It is also important to note here that the DCI-P3 tests were ran in the "Bright" colour profile on the smartphone, so we are not sure if it was actually the P3 colour profile.

Overall, this is a brilliant display. Yes, the display doesn't seem as bright and as vibrant when put next to smartphones like the OnePlus Nord 3 5G, the Oppo Reno 10 Pro, or even the Poco F5, but the colour accuracy is brilliant, the responsiveness with the 120Hz refresh rate is absolutely slick, and we get nice and sharp details on this AMOLED panel. Good stuff.

PERFORMANCE AND BATTERY

Coming to performance, this is where iQOO Neo 7 Pro 5G feels the most at home. The smartphone comes with Qualcomm's second-latest flagship chip, the Snapdragon 8+ Gen 1 paired with up to 12GB of RAM. Further, we also get
