

HP Envy x360 2-in-1

Solid build quality, but performance and display need improvements

₹99,999

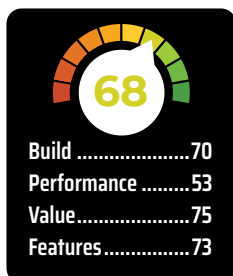

Both parts feel extremely solid and are almost free of flex. The deck in particular flexes a bit but only if you try to press it really hard. Otherwise, the HP Envy x360 15 is a laptop that will withstand years' worth of abuse and wear and tear. The Envy x360 has rounded edges, more on that later, and features a very sturdy hinge. Considering it is a 2-in-1 laptop and its hinge will have to stay firm at a variety of angles, HP has done a great job in designing it. And I can't speak more of the design without mentioning the smooth matte black finish which surrounds the entire laptop. I used the laptop for a little over two weeks and it still looks fresh and free of smudges. Despite me using it while eating lunch every day during the same interval to watch Family Guy. Peter is hilarious, I know. Unlike the designers at HP who were dead serious and absolutely focused while designing the Envy x360 15-inch.

Moving on to the keyboard, the 60% layout is perfect for typing. Your hands stay in the right in the centre and are comfortable throughout the work session. Here's where the rounded edges come into play. They don't penetrate into your wrist and make typing easy and comfortable. Likewise, the key travel is good enough (>1.2mm approx.) and the keyboard is quite silent. More silent than the Samsung Galaxy Book 3 Pro 360, which my colleague uses. The surface of the keys also feels matte to touch, which is a really nice addition, especially if your hands sweat a lot. The size of the keys is also big enough and although I have average size hands I can confirm that you'd have no problem using it even if you have big hands. And speaking of big, the trackpad size is also relatively large. Compared to a 15-inch Macbook Air though the trackpad is small. It has no separate left or right click button but not many laptops have in 2023. The trackpad is fairly levelled and presses evenly when you click on both the left and the right side. And like the rest of the laptop, The trackpad also has a matte touch to it.

Lastly, in terms of I/O, you'd be glad to know that the HP Envy x360 15

W hat'd you want in a laptop that costs around Rs 1 lakh? Solid build quality? Performance? Good battery life? A good display and other basic, but important, stuff right? The answer is "yes" but getting the basics right is very hard. Consider the infrastructure in India for example, we have massive sprawling expressways that shorten this country's humongous size for travelling but at the same time, many streets across the country aren't suitable enough for walking. This again hits my original point home that nailing down the basics is hard. Now let me bring your attention to the HP Envy x360 15, a thin and light 2-in-1 laptop. With a price tag of Rs 99,999 and a meticulously crafted design, it'll surely allure you to splurge. Add a 2-in-1 display with a 360-degree hinge and

you'll definitely be convinced to become Rs 1 lakh poorer. But I hope that you decide, albeit at the last moment, to learn more about this product and fortunately end up reading this exact line. Just to be clear, I am talking about the OLED Intel Core i5 version

of the laptop. I am glad you're here and this is everything you need to know about the HP Envy x360 15.

DESIGN, KEYBOARD AND TRACKPAD

The HP Envy x360 15 has a very solid build quality. I mean it when I say it. For its construction, the laptop uses recycled aluminium. HP also uses ocean-bound plastic in making the laptop's speakers. So the laptop's lid is made out of metal meanwhile its deck is made from a composite of materials.
