

4 are efficiency cores. We compared the processor with a 12th gen Intel Core i7-12650H, which also features 10 cores and 16 threads and similar TDP. However, despite a higher base clock on the 13th gen processor, the 12th gen processor managed to outperform the 13th gen processor in almost all benchmarks, albeit by a small margin.

In general productivity, for which we use the PCMark 10 benchmark, both processors are very close in overall score.

Coming to R23, we can see the 13th gen processor falls short of the 12th gen processor by roughly 200 points on both single and multi-thread performance.

This continues in encryption and decryption as well, with the 12th gen processor winning out a small margin every time.

This ultimately doesn't hamper the gaming performance as we've already seen, and at the end of the day, this is still a pretty fast processor.

The 16GB of DDR5-5200 RAM in the Lenovo LOQ is the fastest we've tested in this price segment. However, the 512GB of NVMe SSD storage could be better. We saw read and write speeds of 2700 MB/s and 2000 MB/s respectively, which is on the lower end, even in this price segment. It's still more than enough for your gaming needs. However, you have two M.2 slots so you can replace or expand storage as per your needs if required.

DISPLAY

Next, we come to the display. The Lenovo LOQ features a 15.6-inch, WQHD (2560x1440) IPS display with a refresh rate of a 165 Hz. That's already impressive for a laptop costing under Rs 1 lac. If that wasn't enough, the display is pretty bright with an advertised peak brightness of 350 nits. We actually tested 367 nits of peak brightness which is even higher than advertised. We also got 96% sRGB coverage and 72% DCI-P3 coverage during our display testing which makes this a pretty solid laptop for your content creation needs, packing both a great display and powerful hardware.

HEAT AND NOISE

Probably the only drawback about the Lenovo LOQ is the heat. This laptop can get uncomfortably hot. While internal temps seem to be fine during stress tests; the CPU hit a peak temp of 86 degrees Celsius. Surface temps can go over 45 degrees in some places which is HOT. One hotspot in particular lies just between the trackpad and spacebar, which radiates heat during intense workloads. This is the other reason we were talking about when we suggested using a separate mouse and keyboard during the build and design section.

The laptop can get loud during intense sessions, but it's not too bad, and does a decent job of keeping the internals cool.

VERDICT

After looking at the gaming performance on the Lenovo LOQ, it is without a doubt

the best gaming laptop you can pick up under the 1 lac mark, at least so far this year. The gaming numbers are the best we've seen, and it's also got one of the best displays we've seen in this price segment. The battery performance is definitely a bit lacking and the SSD speeds are on the lower end, but those are compromises we're totally fine with considering the performance we're getting. Surface temps get pretty high, which is a bit concerning, but that's really the only drawback the Lenovo LOQ has going against it.

—Manish Rajesh

SPECIFICATIONS

Processor: Intel Core i7-13620H (6P + 4E) | GPU: NVIDIA GeForce RTX 4060 (8GB VRAM), TGP: 115W | RAM: 16GB DDR5-5200 | Storage: 512GB NVMe SSD storage (2 M.2 SSD slots) | Display: 15.6-inch WQHD (2560x1440) IPS display, 165Hz, G-Sync
