

Marshall Woburn III

Elegant and powerful, but lacks some basics

₹59,999

screams retro and premium. You can also choose between two colourways – Black and Cream – both of which look equally stunning.

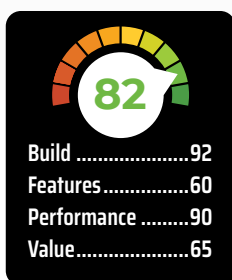

The knobs include volume controls, bass and treble adjusters. There's also a play/pause button, a track skip forward/backward slider knob, and a source button (Bluetooth, AUX, RCA, or HDMI). And lastly, you've got the power switch that is quite literally reminiscent of 'switches' of the yesteryears.

One thing missing on the speaker is a carrying strap, but the company has included a cavity in the back panel which you can slip your hand into. It helps make it a bit easier to carry the speaker, but a carrying strap would have taken that a step further. However, it is not really aimed to be a portable speaker, since it does require constant power to operate. As for connectivity options, the speaker has Bluetooth v5.2, HDMI, RCA, and a 3.5 mm jack.

Marshall has attempted to use sustainable materials in the construction of the Woburn III. It has a PVC-free build which comprises of 70 per cent recycled plastic and vegan leather materials. So, props to the company for that.

Marshall is a legendary audio brand

widely known for its celebrated guitar amplifiers. The brand also has a wide portfolio of speakers and headphones, all renowned for their build and sound quality. So, naturally, when I got the opportunity to review the third iteration of Marshall's flagship speakers, I was immediately excited. The Marshall Woburn III is one of the most pricey speakers you can find on the market at ₹59,999. For that dough, you get a beautiful build, powerful speakers, and an accompanying app. But is the new Marshall Woburn III worth its asking price or are there better options out there? Let's find out in my detailed review of the highly-anticipated Marshall Woburn III.

BUILD AND DESIGN

The design of the Marshall Woburn III is reminiscent of Marshall's old guitar amplifiers. It is a hunk of a speaker at nearly 7.5 kilograms and it measures 12.5 by 15.8 by 8.0 inches. The Woburn III is undeniably retro-looking and I think it looks very

aesthetically pleasing – so much so, that it would make for a fine showpiece in your living room. However, with these dimensions, the speaker wouldn't comfortably fit under any TV, which is a shame since it has HDMI connectivity.

The build quality is excellent though; one of the best in the business. The faux leather material and brass control knobs look ridiculously premium. Up front, the cloth speaker grille with the cursive 'Marshall' branding set it apart visually. The overall design language

FEATURES

Luxury speakers – while usually premium-looking – miss out on some features that are found on other consumer brands' offerings. Here, we miss out on Wi-Fi connectivity and voice assistant support. I did miss Wi-Fi support as speakers from Sonos and other such companies usually pack full Wi-Fi connectivity and features. There's no official IP rating as well, so be wary of using the speaker around water or dust.

There's an accompanying app that allows for some basic customisation. There's an in-app EQ but it is not visual and only allows you to control the bass and treble frequencies – which you can also control via the physical controls, so there are no additional benefits in the EQ department on the app.

There's a Placement Compensation feature within the app that asks you two basic questions to ascertain the
