

Xiaomi Smart TV X Series 65-inch

A competitive large-screen TV with a vibrant touch

₹61,990

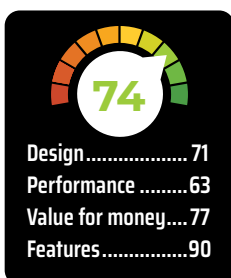

iaomi is renowned for its value-for-money

TVs in India, and the newest X-series TVs from the brand continue this trend by offering a wide array of features along with a generously sized 65-inch display, all at a competitive price point. This is not a TV for purists as Xiaomi has tuned the panel for colours that pop and may apparently resonate with a broad audience. The standout features are Xiaomi's Patchwall and Patchwall+ services which are easy to navigate and make it simpler to discover content, especially for elderly household members.

DESIGN AND REMOTE

The Xiaomi Smart TV X-series 65 features a fairly standard design that is more functional rather than premium. The positive aspect is that

there are minimal distractions on the front. The bezels on three sides are narrow and are lined by a metallic frame that extends towards the rear of the TV. We noticed a slight gap between the narrow plastic strip at the bottom that has the Xiaomi branding on it and the display panel. This slit could accumulate dirt in the long run and will require regular cleaning. There is an LED indicator and a button underneath to manually power on the TV. The TV is solidly built and combines both metal and plastic in equal proportions. The package includes two plastic feet for the TV. Although they might appear a bit flimsy, once attached, they offer secure and stable support, effectively holding the TV in place despite its large size.

The frequently used ports including the three HDMI ports and USB ports are well spaced and positioned towards

the side where they are easily accessible. The ethernet port, optical input and AV ports are positioned in an alcove towards the bottom where they are not as easily accessible.

If you have had some experience with Xiaomi TVs or streaming sticks in the past, you will be familiar with the remote. The remote is quite ergonomic to hold and has hotkeys for four popular apps - Netflix, Prime Video, Disney+Hotstar and Youtube. There are also dedicated keys for Patchwall and Google TV Home.

For mute, you can quickly double-press the volume down button. To pull up the Picture Modes and Input option, you can long-press either the Patchwall button or the Google TV Home button. You will need to learn these shortcuts or else switching between input sources and picture modes will feel very tedious.

PERFORMANCE AND SOFTWARE

The Xiaomi Smart TV X-series is powered by a quad-core processor paired with 2GB RAM. The internal storage of 8GB (4.3GB available) should be workable in the long run if all you need to do is stream content from popular apps. After installing 8 to 10 apps that I frequently use, around 2.4GB remains free.

Many emerging brands these days offer 16GB storage in the affordable and mid-range segments. Tier-1 brands like Samsung, LG and Sony still stick to 8GB for most of their affordable and midrange options. The UI transitions are not particularly snappy, but we didn't notice any lag in the interface either. This could change for the worse if you completely fill up the available storage.

The software is the latest Google TV interface along with a Patchwall loaded on top. Google TV perks like Google Assistant and Chromecast built-in work flawlessly.

The Patchwall launcher tries to refine the content discovery experience for Indian users and it kind of works, especially for elderly people at home. My father finds it significantly simpler to use Patchwall and doesn't require
