

Motorola is banking on its innovation legacy and experience to target the top 3 spot in India

Soham Raninga | soham@digit.in

The recent introduction of the iconic Moto Razr series of smartphones marks a significant resurgence for Motorola in the realm of ultra-premium mobile devices. These phones not only carry forward the legacy of the Moto Razr but also showcase pioneering technological advancements, many of which are industry firsts. Our conversation with Mr. Shivam Ranjan, (Head of Marketing, Asia-Pacific, Motorola), provided us with deeper insights into Motorola's forthcoming endeavors, particularly within the context of the Indian market. Motorola is placing a substantial emphasis on the foundational spirit of innovation that defines the brand. This encompasses various aspects, including hardware, design, and software integration. The pipeline is brimming with exciting developments as Motorola ambitiously aims for a spot among the top three contenders in India's smartphone market.

Q Is Motorola ready to flip the script when it comes to the Indian market? Motorola Global President, Sergio Buniac did hint about aiming to be amongst the top 3 players in India. How does Motorola plan to achieve that given the cut-throat competition and price war in the Indian market?

A As mentioned by our global president, Motorola aims to be in the top

Shivam Ranjan
Head of Marketing, Asia-Pacific,
Motorola

3 smartphone brands globally, which makes it imperative for us to aim for the top 3 spot in India as well, given that India is the world's 2nd largest smartphone market. We believe that Motorola is uniquely poised to witness growth due to our focus on meaningful innovations such as 5G, a premium portfolio leading with design and innovation beyond hardware and our unique software experiences. We were one of the fastest-growing Android brands in India, showcasing a phenomenal 56% premium to market growth in Q1 of CY 2023. Our aim is to continue the momentum to drive exponential growth in India across all consumer segments and continue to drive high double-digit

Premium to Market growth over the next 3 years.

This will be driven by multiple initiatives that we are undertaking to create differentiation in the market. First, we would like to leverage the premiumization trend in the Indian market to drive hypergrowth for our premium smartphone portfolio led by Edge and Razr franchises. We are not only leaders in form factors such as foldable but are also differentiating our premium portfolio through premium colors, materials, and design options that are emerging through our global partnership with Pantone – a global leader in colours and fashion trends. All this, while ensuring that our devices come with the latest and the greatest when it comes to hardware with leading specifications such as the highest refresh rate curved displays, latest processors, fastest charging, and best-in-class cameras.

Second, 5G is a key segment for us as the penetration of 5G devices is growing rapidly in the Indian market. Motorola has been recognized as India's best 5G smartphone brand in 2023, which further reinforces our commitment to providing consumers with the best smartphone experience across price points. By having top-of-the-line 5G products across price points we are ensuring that we are bringing the best of 5G in terms of connectivity as well as hardware and software features to deliver the most advanced 5G experience to more consumers in India than ever.

Another area where we are able to differentiate ourselves from the competition is through our software experiences. ThinkShield for mobile and Moto Secure are unique to Motorola and provide business-grade security to consumers across most of our smartphone range. Additional software features include Ready For, Family Spaces, and Moto gestures that power multi-device experiences, and unique ways of smartphone interaction that open up a variety of use cases for the individual user and the family.

Furthermore, we are committed to the Govt of India's 'Make in India' initiative. Motorola already manufac-
