iPhone 15 is facing issues with USB-C power banks

Apple recently launched its iPhone 15 smartphone series. Apple's latest iPhone series

boasts significant design enhancements, notably the introduction of the long-awaited USB Type-C port.

In contrast, the iPhone 14 series featured a lightning port. Apple claims that you can charge your iPhone 15 phones with any USB Type-C. However, according to a new report, some USB-C power banks failed to work with the iPhone 15.

According to a report by MacRumors, while Apple introduced a USB-C port to its iPhone 15 lineup to enable compatibility with USB-C cables, USB-C power banks, and other accessories, some USB-C power banks are experiencing compatibility issues with the iPhone 15, leading to charging problems. Sometimes the iPhone 15 won't charge, and other times it will charge the power bank. <https://bit.ly/48KdGqs>

Google's Fitbit Charge 6 is here!

Google has introduced its new Fitbit Charge 6. The Fitbit Charge 6 comes with advanced health sensors which provide the most accurate heart rate tracking on a Fitbit tracker yet, according to the company. It also comes with the ability to connect to compatible gym equipment and fitness apps to see real-time heart rate during workouts, and much more.

HP to make Chromebooks in India under new partnership with Google

HP has announced that it will collaborate with Google to manufacture Chromebooks in India, reaffirming its commitment to the government's Make in India initiative.

This partnership will foster a joint vision to support the digital education ecosystem in the country by offering affordable, safe, and high-quality laptops to schools and institutions.

These Chromebook devices will be made at the Flex Facility near Chennai, where HP has been producing a range of laptops and desktops since August 2020. "The production of HP Chromebooks is starting from October 02, 2023, and will cater to the demand for affordable PCs in India mainly from the education sector," HP said in a statement about the new partnership. <https://bit.ly/3PNEmhl>

Apple iPhone SE 4 to feature Action Button

Apple's fourth-generation iPhone SE smartphone is anticipated to feature significant changes in both its design and hardware. According to a new report, the iPhone SE 4 is expected to feature an Action Button, USB-C Port, Face ID and more. According to a report by MacRumors, citing sources, the upcoming iPhone SE 4, known internally as "Ghost," is expected to feature a fresh design that draws almost entirely from the base model iPhone 14.
