

11 Pro+, and the likes. The storage on the smartphone, however, took me by surprise. The speeds are slow as compared to most smartphones in this range. This basically means that the smartphone is good in terms of multitasking and gaming and all the heavy lifting, but the data transfer speeds aren't as impressive as other performance aspects where the iQOO Z7 Pro excels.

Coming to day-to-day usage, as expected, the iQOO Z7 Pro is snappy. The smartphone doesn't lag, doesn't slow down, there are no frame drops while gaming, and you can open as many apps as possible without worrying about the memory since the RAM management is also pretty good. The best part about the iQOO Z7 Pro is the thermal management. The smartphone doesn't heat up even after long gaming sessions. The longest gaming session I had on the iQOO Z7 Pro was about an hour, and the smartphone didn't heat up at all. Impressive, given the slim 7.36mm profile of the smartphone.

## BATTERY

On the iQOO Z7 Pro, we get a 4,600mAh battery with support for 66W fast charging. The battery, while looking small on paper, isn't bad at all on this smartphone. Here, we get iQOO's software optimisation towards gaming with the Monster mode and the likes, so while gaming, the smartphone is able to save battery. For example, during a 15-minute gaming session on Call of Duty Mobile, the Z7 Pro only lost 4 percent of its battery.

In the video loop test, the iQOO Z7 Pro lasted a good 850 minutes or more than 14 hours constantly. This is great backup, especially for a 4,600mAh unit, which seems less on paper but beats many 5,000mAh battery smartphones in our tests. The charging is also good as the 66W speed fills up the iQOO Z7 Pro in just over 45 minutes.

## CAMERA

So for the camera testing, I was one of the few lucky ones to be invited by iQOO to Goa for testing this smartphone's cameras. During my testing, the more photos I clicked with this phone, the

more impressed I became with how nicely iQOO has tuned the cameras. The photos in good lighting conditions are sharp, the details are nice, and the photos are able to represent colours quite accurately.

Further, the dynamic range on these photos is very good. During my review, I was also using the recently-launched Vivo V29e from the sister company and to my surprise, the photos from the iQOO Z7 Pro showcased better dynamic range. The photos are nice and vibrant, and most

given just how good the images in decent lighting conditions are.

## VERDICT

To conclude, the iQOO Z7 Pro is a proper iQOO smartphone. We get a superb price-to-performance ratio, we get a good camera setup, very good battery and to sweeten all of that, we get a beautiful design with the curved glass on front and back.

Now, there are shortcomings. The display struggles with sunlight visibility

## AGENT 001's thoughts

**"The iQOO Z7 Pro is like the James Bond of smartphones – sleek, powerful, and ready for action! With top-notch performance, a stunning design, and camera skills that could rival a spy's, it's a budget-friendly gadget that's licensed to thrill."**

of the times, the smartphone captures amazing shots.

This time around, iQOO has also given some other features like Camera Panning and low light portraits, which gave a slight hint of Vivo's camera smarts spilling over to iQOO (not complaining at all). During my time with this camera, I really missed an ultra-wide angle shooter. Now, I get that the company had to keep the price in check, but given the scenic location I was testing this camera at, I really wished there was a wide angle lens.

Overall, this is very good camera performance. I'm sure buyers of the iQOO Z7 Pro will like what the smartphone has to offer. Yes, the images are more on the vibrant side, but the details remain intact most of the time. Yes, at times there is a halo effect around lights at night, but it can be fixed with a bit of effort. Yes, there is no wide angle lens, but all these issues are minor,

despite showing good numbers on the Lux Meter. There is no wide-angle lens, and this time around we have seen bloatware make it to iQOO smartphones so that is never good. But despite all this, the iQOO Z7 Pro does what it is supposed to, and does it gracefully.

–Darab Mansoor Ali
