

the Infinix Zero 30 5G looks surprisingly clean; the company has definitely taken steps to improve the overall look and feel of XOS. Animations are smooth, icons look clean, and it is a visually pleasing experience. There is some bloatware in the form of Infinix apps and some third-party apps. Sadly, you cannot uninstall any of these Infinix apps, so you'll have to deal with them. Also, the Palm Store app sends a lot of notifications to download certain apps,

for quick social media shares. However, the colours are a bit of a hit-or-miss. In indoor lighting, I saw that the camera favoured turning the scene slightly yellow, even though there was no yellow lighting in the room. It didn't happen outdoors, so it must be an issue with the phone's AI processing.

Close up photos look good. The fringing is minimal and the background bokeh effect is nice and strong. Portrait shots have good edge detection but human skin

charging. The phone can be topped up from empty to full in 49 minutes, according to our tests, which is pretty good. The battery life of the Infinix Zero 30 5G is nothing to write home about, but it is decent enough for casual users. It doesn't quite match up to the Vivo V29e or Samsung Galaxy F54's battery performance but it stands its ground.

In our 4K video loop test, the phone lasted a good 14 hours and 14 minutes, which is pretty decent. The phone's battery should last for over a day for most casual users, however, medium to heavy users may need to plug it in during the evening or just before sleeping.

Gangsta Granny's thoughts

"This Infinix Zero 30 5G ain't playin' around, rockin' a sleek design and a display so smooth it'll make your head spin. But watch out for those low-light shots, they might leave you in the dark!"

which can get annoying. However, I did not face as much of an issue with bloatware as I did on some Xiaomi and Realme phones.

Sadly, the company only provides one major Android update and 2 years of security patches, which is lacklustre.

CAMERAS

The Infinix Zero 30 packs a pretty decent camera setup. There's a 108 MP Samsung ISOCELL HM6 primary camera with OIS, a 13 MP ultrawide shooter, and a token 2 MP macro lens. For selfies, the phone has a 50 MP Samsung ISOCELL JN1 sensor. Infinix has also provided up to 4K at 60 fps video on both the rear and front cameras, which is a rarity at this price.

The output of the 108 MP primary camera is pretty decent in daylight or indoor lighting. The dynamic range is good and the detail retention is decent as well. You will notice a bit of detail loss if you pixel-peep but the quality is good enough

tones are whitewashed, making them look unnatural. The 13 MP ultrawide camera takes decent photos, however, the highlights are overexposed at times. There is also noticeable detail loss in the corners of the photos, but the pictures are serviceable at this price. The 50 MP selfie camera has some focussing issues despite having autofocus, it sometimes refuses to lock focus on the face in difficult lighting conditions. The problem of over-smoothing and whitening the face is prevalent here as well.

So far, the cameras are pretty decent for the price, but they do falter in low light. The main camera takes shots with quite a bit of noise and low detail levels, so keep that in mind if you take a lot of shots during nighttime.

BATTERY

The Infinix Zero 30 5G features a 5,000 mAh battery with 68 W PD 3.0 fast

VERDICT

The Infinix Zero 30 5G is an exemplary mid-range smartphone that is well worth its asking price. The design is fantastic, the AMOLED display is bright and vibrant, the performance is top-level for the price, and the battery life is pretty decent as well. My biggest gripes are the mediocre low-light camera performance (especially since daytime photos actually look pretty good) and only one major Android update – which may be a deal breaker for some.

The company is expanding its service centres across India, so after-sales service shouldn't be a problem as well. The software has also improved tremendously, but there's still room for some further refinement. Overall though, if you are not someone who clicks a lot of pictures in low light, the Infinix Zero 30 5G just may be one of the most well-balanced mid-range smartphones under ₹25,000.

–Dhriti Datta

SPECIFICATIONS

Processor: MediaTek Dimensity 8020 | RAM: 8 / 12 GB LPDDR4X | Internal storage: 256 GB UFS 3.1 | Expandable storage: No | Display: 6.78-inch FHD+ Curved AMOLED | Display refresh rate: 144 Hz | Display protection: Gorilla Glass 5 | Cameras (rear): 108 MP + 13 MP + 2 MP | Selfie camera: 50 MP with 4K 60 fps video | Battery capacity: 5,000 mAh | Charging: 68 W Charging PD 3.0 | OS: Android 13, XOS 13 | IP rating: IP53
