

Boo-Man's thoughts

"The Moto G54 5G offers solid performance, excellent battery life, and a capable primary camera, making it a compelling choice for users prioritizing these aspects over premium design and display quality. However, the lackluster display may be a drawback for those who value vibrant visuals."

decently well, but it lagged behind the iQOO Z7 significantly. The iQOO Z7 is a gaming monster, so that was expected. Sadly, the Moto G54 refused to run 3D Mark but in GFXBench, it obtained good scores which beat out the Realme 11x in all tests and the Samsung Galaxy M14 in two tests by a healthy margin. This was echoed in real-life gaming, where the Moto G54 didn't break a sweat playing Call of Duty: Mobile on high graphics and very high frame rate. There were minimal instances of lag and stutter, and the overall experience was very enjoyable.

The phone also performed exceedingly well in the CPU Throttling Test, throttling to merely 94 per cent of its peak performance, so you can expect the phone to perform at near maximum power even under sustained workloads.

As for the software, the phone ships with Android 13 out of the box with Moto's minimal MyUX skin on top. The MyUX skin is known for being bloatware-free, but surprisingly, there are a few games and third-party apps preinstalled here. This is still manageable compared to what Xiaomi and Realme phones have, and you can uninstall these 4-5 bloatware apps easily. What's disappointing is the software support. You get only one major OS update and three years of security updates, which is on the lower side and can be a deal breaker for many.

CAMERAS

The Moto G54 5G houses a dual rear camera setup consisting of a 50 MP camera with Optical Image Stabilisation and an 8 MP ultrawide shooter that also works as a macro and depth lens. For selfies, you've got a humble 16 MP shooter. Both the rear and front cameras can record at only 1080p at 30 fps.

The primary camera impressed me with its detail retention, colours, and dynamic range. Photos come out looking nice and detailed, as well as quite natural when it comes to colours. Portraits look good too, with decent edge detection and good colours. The skin tones are slightly washed up at times, but it's nothing too bad – perfectly serviceable for around ₹15,000.

The ultrawide camera has slightly inconsistent colour science, and the detail is not as sharp in the corners. However, there's not a lot of barrel distortion, which is a good thing. Macro shots look surprisingly good as well.

Low-light images are where the Moto G54's camera falters. There's quite a bit of noise and low levels of detail. The selfie camera takes good pictures in ideal lighting conditions but messes up in tricky lighting and low light. Overall, a decent camera experience with a few issues cropping up here and there.

BATTERY LIFE

Equipped with a 6,000 mAh battery, the Moto G54 has exceptional battery life. It is one of the longest-lasting smartphones in the market around ₹15,000. The 6,000 mAh battery combined with the relatively power-efficient Dimensity 7020 SoC means that most users will get at least two days' worth of juice out of this phone.

In our 4K video loop test, the Motorola G54 ran for 18 hours and 1 minute uninterrupted, which is fantastic. The phone only dropped 5 per cent battery when running Google Maps for an hour, and 3 per cent when playing 15 minutes of Call of Duty: Mobile. You also get a 33 W fast charger out of the box, which tops the phone from zero to full in a little less than an hour and a half. Not the fastest, but pretty good for the price!

VERDICT

What the Motorola Moto G54 5G lacks in design and display chops, it makes up for in battery life and raw performance. At just over ₹15,000, you also get a surprisingly good primary camera that clicks some stunning pictures in ideal lighting conditions. The 2-day-long battery life is one of the phone's best features and 33 W of fast charging is serviceable for the price too. What disappointed me was the dull and dim IPS LCD display. However, if you can get past that, the Moto G54 is an impressive phone worth checking out.

–Dhriti Datta

SPECIFICATIONS

Processor: MediaTek Dimensity 7020 | RAM: 8 / 12 GB LPDDR4X | Internal storage: 128 / 256 GB UFS 2.2 | External memory: Yes, microSD card up to 1 TB | OS: Android 13, MyUX | Display: 6.5-inch IPS LCD, Full HD+ (2400 x 1800 pixels), 120 Hz refresh rate | OS: Android 13, MyUX | Battery capacity: 6,000 mAh | Charging: 33 W | Cameras (rear): 50 MP OIS + 8 MP | Selfie camera: 16 MP | Video (front and rear): 1080p at 30 fps | IP rating: IP52 | Weight: 192 g
