

CAMERA

The Honor features a 200 MP Samsung ISOCELL HP3 primary camera with f/1.9 aperture but sadly, there's no optical image stabilisation. The ultrawide lens doubles as a pretty capable macro camera that you can get some really usable shots out of. On the front, the Honor 90 rocks a 50 MP selfie shooter. Both the front and rear cameras are capable of 4K at 30 fps video capture, which is fantastic and quite rare at this price, to be honest.

The main camera on the Honor 90 captures 12.5 MP pixel-binned photos by default. The pictures captured in ideal lighting look impressive – the detail is good, the colours are natural, and even the dynamic range is nice and controlled. Some shots can look a tad oversharpened but it's not done in an excessively distasteful manner. If the lighting gets a bit tricky though, the dynamic range takes a hit. Shadows get crushed at times, which brings down the detail levels in the photo. You can also take 200 MP shots on this phone, and while the image is more detailed, the colours are slightly off. There's no telephoto lens but the 2x zoom shots almost look identical in detail to the 1x ones. Portrait shots on the Honor 90 look good – the colours are vibrant, and edge detection is excellent. However, the phone smooths skin textures and white-washes Indian subjects a bit. As for the ultrawide camera, I actually found it quite impressive in ideal lighting. Sure, there's a bit more barrel distortion than desired but the detail and the colour consistency are great.

The selfie camera's photos look pretty good. The skin detail is, once again, lacking but overall colour reproduction, detail retention and dynamic range are decent.

Honor has gone down the route of maintaining the 'night' look of low light shots, so the shadows are crushed quite a bit in most nighttime pictures, but the overall subtle glow of the lights and detail retention in the highlights makes the shots look appealing. Ultrawide low-light shots could be better though as there's too much noise and low levels of detail.

Overall though, I don't dislike the camera quality of the Honor 90. Sure, it's

not perfect, but for casual use and social media posts, it does more than enough at this price. There are some AI camera features as well that will attract Gen Z.

BATTERY LIFE

The Honor 90 features a 5,000 mAh cell on board. It's a one-day battery phone for light users but heavy users will have to plug the phone in before the end of the day. In our 4K video loop test, the Honor

phones under ₹40,000. The phone is priced at ₹37,999 for the base variant which is quite overpriced for the performance on offer. It is decent if you manage to get some offers and are willing to let go of some performance. The phone knocks it out of the park with its slim profile, classy rear panel design, and excellent in-hand feel. It's not just all looks; the Honor 90 also has a world-class display, it has a pretty impressive 200 MP primary camera, and

AGENT 001's thoughts

"The Honor 90 is a style statement with a gorgeous design and top-notch display, but it falls short in terms of performance compared to its competition in the sub-₹40,000 segment. If you prioritise aesthetics and camera quality over raw performance, it's worth considering, especially if you can snag it at a discounted."

90 only lasted a paltry 12 hours and 20 minutes. This is nowhere close to the best battery life in the segment.

I saw the phone drop battery levels pretty rapidly when I played games. 30 minutes of COD: Mobile dropped the battery by 11 per cent, which is quite a lot. I also noticed that the phone's battery only dropped by 4 per cent in the first 15 minutes of Call of Duty but as the phone got hotter, the battery levels started dropping faster.

As for charging, the Honor 90 supports 66 W wired fast charging, but there's no wireless charging support here. The charging speeds are quite good; you can expect the phone to charge from empty to full in just under an hour.

VERDICT

If you are scouring the market for a smartphone that's high on style quotient, the Honor 90 is one of the best-designed

66 W fast charging. Of course, it is not the best-performing phone and probably not the best option for gamers since we've got speed monsters like the iQOO Neo 7 Pro and POCO F5 in this price range. Nevertheless, for casual users, the performance is still fluid and MagicOS 7.1 is relatively light on bloatware as well. Of course, it's not all positive here, there are some quirks as well, which you need to account for.

–Dhriti Datta

SPECIFICATIONS

Processor: Snapdragon 7 Gen 1 Accelerated Edition | GPU: Adreno 644 | Weight: Approx. 183 g | Display: 6.7" AMOLED, 2664 x 1200 resolution | Display refresh rate: 120 Hz | OS: Android 13, MagicOS 7.1 | Cameras (rear): 200 MP + 12 MP + 2 MP | Front camera: 50 MP | Video: Up to 4K at 30 fps (rear and front) | Battery capacity: 5,000 mAh | Charging: 66 W HONOR SuperCharge
